IBM DB2 Series **DB2 Database Design and Administration** Robert Heydt, Diane Heydt, 1989-05-02 An essential tool for all DB2 developers. DB2 Version 2 contains up to the minute information on concerning the newly released Version 2 of DB2. **Altova® MapForce® 2013 User & Reference Manual , **DB2 Answers!**** Richard Yevich, 1999 Alphabetically ordered by topic, speedy solutions are within reach of one's desktop. Convenience and savings are found in one book so that readers can avoid spending exorbitant amounts of money on tech support calls. **Readings in Artificial Intelligence and Databases** John Mylopoulos, Michael L. Brodie, 2014-06-28 The interaction of database and AI technologies is crucial to such applications as data mining, active databases and knowledge based expert systems. This volume collects the primary readings on the interactions, actual and potential between these two fields. The editors have chosen articles to balance significant early research and the best and most comprehensive articles from the 1980s. An in depth introduction discusses basic research motivations, giving a survey of the history, concepts and terminology of the interaction. Major themes, approaches and results, open issues and future directions are all discussed, including the results of a major survey conducted by the editors of current work in industry and research labs. Thirteen sections follow, each with a short introduction. Topics examined include semantic data models with emphasis on conceptual modeling techniques for databases and information systems and the integration of data model concepts in high level data languages, definition and maintenance of integrity constraints in databases and knowledge bases, natural language front ends, object oriented database management systems, implementation issues such as concurrency control and error recovery and representation of time and knowledge incompleteness from the viewpoints of databases, logic programming and AI. **DB2** Gabrielle Wiorkowski, David Kull, 1988 Objects and Databases Alan Dearle, Roberto V. Zicari, 2010-09-21 According to Francois Bancillon and Won Kim, SIGMOD RECORD Vol 19 No 4 December 1990, object oriented

databases started in around 1983. Twenty seven years later this publication contains the proceedings of the Third International Conference on Object Oriented Databases (ICOODB 2010). Two questions arise from this: why only the third and what is of interest in the field of object oriented databases in 2010. The first question is easy: in the 1980s and 1990s there were a number of conferences supporting the community: the International Workshops on Persistent Object Systems started by Malcolm Atkinson and Ron Morrison, the EDBT series and the International Workshop on Database Programming Languages. These database oriented conferences complimented other OO conferences including OOPSLA and ECOOP but towards the end of the last century they dwindled in popularity and eventually died out. In 2008 the First International Conference on Object Databases was held in Berlin. In 2009 the second ICOODB conference was held at the ETH in Zurich as a scientific peer reviewed conference. What is particular about ICOODB is that the conference series was established to address the needs of both industry and researchers who had an interest in object databases in innovative ways to bring objects and databases together and in alternative extensions to relational databases. The first conference set the mould for those to follow: a combination of theory and practice with one day focusing on the theory of object databases and the second focusing on their practical use and implementation.

Database and Expert Systems Applications Christine Strauss, Toshiyuki Amagasa, Gabriele Kotsis, Amin Tjoa, Ismail Khalil, 2023-08-17. The two volume set LNCS 14146 and 14147 constitutes the thoroughly refereed proceedings of the 34th International Conference on Database and Expert Systems Applications (DEXA 2023) held in Penang, Malaysia in August 2023. The 49 full papers presented together with 35 short papers were carefully reviewed and selected from a total of 155 submissions. The papers are organized in topical sections as follows: Part I: Data modeling, database design, query optimization, knowledge representation; Part II: Rule based systems, natural language processing, deep learning, neural networks.
