*Improving z/OS Application Availability by Managing Planned Outages* Frank Kyne, Andy Clifton, Justin Deane, Fernando Ferreira, Richard Gunjal, Chuck Laurent, John Papp, Judy Ruby-Brown, Maida Snapper, Michael Stephen, Dave Viguers, Marna Walle, Yvonne Zemotel, IBM Redbooks, 2014-12-22 This IBM Redbooks publication is intended to make System Programmers Operators and Availability Managers aware of the enhancements to recent releases of IBM z/OS and its major subsystems in the area of planned outage avoidance It is a follow on to rather than a replacement for z/OS Planned Outage Avoidance Checklist SG24 7328 Its primary objective is to bring together in one place information that is already available but widely dispersed It also presents a different perspective on planned outage avoidance Most businesses care about application availability rather than the availability of a specific system Also a planned outage is not necessarily a bad thing if it does not affect application availability In fact running for too long without an IPL or subsystem restart might have a negative impact on application availability because it impacts your ability to apply preventive service Therefore this book places more focus on decoupling the ability to make changes and updates to your system from IPLing or restarting your systems

Exploiting the IBM Health Checker for z/OS Infrastructure Mario Bezzi, Neil O'Connor, Sharon Phillips, Ulrich Thiemann, Helen Tsang, IBM Redbooks, 2010-12-22 The IBM Health Checker for z

OS also identified in this book as IBM Health Checker is a key component of the z OS operating system whose objective is to identify potential problems before they impact the system s availability To do this it continuously checks many current active z OS and sysplex settings and compares them with those suggested by IBM or defined by you The IBM Health Checker for z OS is made of two parts A framework that provides check management and execution services It supports check development by IBM independent software vendors ISVs and users Individual checks that look for specific z OS settings and definitions checking for potential problems Customers can use the IBM Health Checker for z OS infrastructure to run their own checks extending the reach of IBM Health Checker for z OS to environment specific settings This IBM Redpaper™ publication introduces the IBM Health Checker and describes how to activate and use it It teaches you how to exploit the IBM Health Checker infrastructure to run custom checks and how to identify good candidates for writing your own checks This publication also provides a number of sample checks to give you a good start creating custom checks for your environment

**Streamline Business with Consolidation and Conversion to DB2 for z/OS** Paolo Bruni, Marcos Caurim, Elise Gotay, Susan Lawson, Glenn McGeoch, Rebecca Poole, IBM Redbooks, 2014-11-05 Time to market flexibility and cost reduction are among the top concerns common to all IT executives. If significant resource investments are placed in mature systems, IT organizations need to balance old and new technology. Older technology such as non-IBM pre-relational databases is costly, inflexible, and non-standard. Users store their information on the mainframe and thus preserve the skills and qualities of service their business needs. But users also benefit from standards-based modernization by migrating to IBM DB2 for z/OS. With this migration, users deliver new application features quickly and respond to changing business requirements more effectively. When migrating, the main decision is choosing between conversion and re-engineering. Although the rewards associated with rebuilding mature applications are high, so are the risks, and customers that are embarking on a migration need that migration done quickly. In this IBM Redbooks publication, we examine how to best approach the migration process by evaluating the environment, assessing the application as a conversion candidate, and identifying suitable tools. This publication is intended for IT decision makers and database administrators who are considering migrating their information to a modern database management system.
