Discovering Mathematics with Magma Wieb Bosma,John Cannon,2007-07-10 The appearance of this volume celebrates the rst decade of Magma a new computer algebra system launched at the First Magma Conference on Computational Algebra held at Queen Mary and Westfield College London August 1993 This book introduces the reader to the role Magma plays in advanced mathematical research Each paper examines how the computer can be used to gain insight into either a single problem or a small group of closely related problems The intention is to present sufficient detail so that a reader can gain insight into the mathematical questions that are the origin of the problems and develop an understanding as to how such computations are specified in Magma It is hoped that the reader will come to a realisation of the important role that computational algebra can play in mathematical research Readers not primarily interested in using Magma will easily acquire the skills needed to undertake basic programming in Magma while experienced Magma users can learn both mathematics and advanced computational methods in areas related to their own The core of the volume comprises 14 papers The authors were invited to submit articles on designated topics and these articles were then reviewed by referees Although by no means exhaustive the topics range over a considerable part of Magma's coverage of algorithmic algebra from number theory and algebraic geometry via representation theory and computational group theory to some branches of discrete mathematics and graph theory The papers are preceded by an outline of the Magma project a brief summary of the papers and some instructions on reading the Magma code A basic introduction to the Magma language is given in an appendix

The editors express their gratitude to the contributors to this volume both for the work put into producing the papers and for their patience

Interdiscursive Readings in Cultural Consumer Research George Rossolatos,2018-10-01 The cultural consumption research landscape of the 21st century is marked by an increasing cross disciplinary fermentation At the same time cultural theory and analysis have been marked by successive inter turns most notably with regard to the Big Four multimodality or intermodality interdiscursivity transmediality or intermediality and intertextuality This book offers an outline of interdiscursivity as an integrative platform for accommodating these notions To this end a call for a return to Foucault is issued via a critical engagement with the so called practice turn This return does not seek to reconstitute venerable Foucauldianism but to theorize inters as vanishing points that challenge the integrity of discrete cultural orders in non convergent manners The propounded interdiscursivity approach is offered as a reading strategy that permeates the contemporary cultural consumption phenomena that are scrutinized in this book against a pan consumptivist framework By

drawing on qualitative and mixed methods research designs facilitated by CAQDAS software the empirical studies that are hosted here span a vivid array of topics that are directly relevant to both traditional and new media researchers such as the consumption of ideologies in Web 2.0 social movements the ability of micro celebrities to act as cultural game changers the post loyalty abjective consumption ethos The theoretically novel approaches on offer are coupled with methodological innovations in areas such as user generated content artists branding and experiential consumption
