Highway Safety Design and Operations Guide, 3rd Edition , *Airman's Guide* ,1960 *Guidelines for Reducing Porpoise Mortality in Tuna Purse Seining* James M. Coe,D. B. Holts,Richard W. Butler,1984 Technical guidelines for scientific surveys in the Mediterranean and the Black Sea Food and Agriculture Organization of the United Nations,2020-05-01 In the Mediterranean and the Black Sea the assessment of demersal stocks mainly relies on scientific surveys bottom and beam trawl while the assessment of pelagic stocks is essentially based on acoustic surveys using acoustic techniques with mid water trawling These routine surveys at sea provide essential information which in turn are crucial to fine tune the assessments of the status of resources and to estimate more precisely indicators at the population and fish community levels However survey practices differ from one subregion to another each approach having its own strengths and limitations In addition there is still a lack of large scale standardized surveys aimed at analysing the diversity and distribution of the main demersal and pelagic species across the Mediterranean and the Black Sea One way of tackling this issue is to carry out international scientific surveys covering the main demersal and pelagic stocks based on a common methodology The methodology presented in this publication aims at supporting the planning and implementation of regional demersal bottom and beam trawl and pelagic acoustic surveys It can be useful for the implementation of new surveys at sea in areas where demersal trawl and pelagic acoustic surveys are not regularly carried out It can also contribute to increasing comparability between existing surveys thanks to the standardization of methods sampling of catches and data recording and analysis Finally it represents a valuable tool to define minimum requirements towards sustainability and management objectives at the regional and subregional level
