Theoretical and Empirical Exercises in Econometrics Nlandu Mamingi, 2005 This is a textbook designed for undergraduate and graduate students and is the result of the author's more than twenty years of involvement with econometrics as both teacher and researcher It contains theory problems and answers many of which have already been tested extensively in classrooms and tutorials and then refined for the book It includes the following topics single equation regressions dummy and limited dependent variable models simultaneous equations models dynamic regression models unit roots cointegration and error correction models aggregation over time issues forecasting and panel data models The book does not attempt to duplicate the many standard econometrics books Rather it supplements them by focusing exclusively on theoretical and empirical exercises in a systematic way Although much of the material has a Caribbean flavour its rigorous and clear presentation will appeal to students and teachers worldwide Introduction to Econometrics James H. Stock, Mark W. Watson, 2003 Designed for a first course in introductory econometrics Introduction to Econometrics reflects modern theory and practice with interesting applications that motivate and match up with the theory to ensure students grasp the relevance of econometrics Authors James H Stock and Mark W Watson integrate real world questions and data into the development of the theory with serious treatment of the substantive findings of the resulting empirical analysis

J. Goldberger, 2009-06-01 This is a textbook for the standard undergraduate econometrics course Its only prerequisites are a semester course in statistics and one in differential calculus Arthur Goldberger an outstanding researcher and teacher of econometrics views the subject as a tool of empirical inquiry rather than as a collection of arcane procedures The central issue in such inquiry is how one variable is related to one or more others Goldberger takes this to mean How

does the average value of one variable vary with one or more others and so takes the population conditional mean function as the target of empirical research The structure of the book is similar to that of Goldberger's graduate level textbook *A Course in Econometrics* but the new book is richer in empirical material makes no use of matrix algebra and is primarily discursive in style A great strength is that it is both intuitive and formal with ideas and methods building on one another until the text presents fairly complicated ideas and proofs that are often avoided in undergraduate econometrics To help students master the tools of econometrics Goldberger provides many theoretical and empirical exercises and on an accompanying diskette real micro and macroeconomic data sets The data sets deal with earnings and education money demand firm investment stock prices compensation and productivity and the Phillips curve THE DATA SETS CAN BE FOUND HERE *Exercises in Econometrics* P.
