Green,1970      **Energy Research Abstracts** ,1992-03      **Scientific and Technical Aerospace Reports** ,1995 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database      **Integrated Models of Cognitive Systems** Wayne D. Gray,2007-04-19 The field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors The problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge emotion cognition and the cognitive

system These problems must be solved in order to produce integrated cognitive models of moderately complex tasks Architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional processes Because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control Type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller This book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models It will be an important resource for professional and student researchers in cognitive science cognitive engineering and human factors Contributors Kevin A Gluck Jerry T Ball Michael A Krusmark Richard W Pew Chris R Sims Vladislav D Veksler John R Anderson Ron Sun Nicholas L Cassimatis Randy J Brou Andrew D Egerton Stephanie M Doane Christopher W Myers Hansj rg Neth Jeremy M Wolfe Marc Pomplun Ronald A Rensink Hansj rg Neth Chris R Sims Peter M Todd Lael J Schooler Wai Tat Fu Michael C Mozer Sachiko Kinoshita Michael Shettel Alex Kirlik Vladislav D Veksler Michael J Schoelles Jerome R Busemeyer Eric Dimperio Ryan K Jessup Jonathan Gratch Stacy Marsella Glenn Gunzelmann Kevin A Gluck Scott Price Hans P A Van Dongen David F Dinges Frank E Ritter Andrew L Reifers Laura Cousino Klein Michael J Schoelles Eva Hudlicka Hansj rg Neth Christopher W Myers Dana Ballard Nathan Sprague Laurence T Maloney Julia Trommersh user Michael S Landy A Hornof Michael J Schoelles David Kieras Dario D Salvucci Niels Taatgen Erik M Altmann Richard A Carlson Andrew Howes Richard L Lewis Alonso Vera Richard P Cooper and Michael D Byrne *Elements of Statistical Computing* R.A. Thisted,2017-10-19 Statistics and computing share many close relationships Computing now permeates every aspect of statistics from pure description to the development of statistical theory At the same time the computational methods used in statistical work span much of computer science Elements of Statistical Computing covers the broad usage of computing in statistics It provides a comprehensive account of the most important computational statistics Included are discussions of numerical analysis numerical integration and smoothing The author give special attention to floating point standards and numerical analysis iterative methods for both linear and nonlinear equation such as Gauss Seidel method and successive over relaxation and computational methods for missing data such as the EM algorithm Also covered are new areas of interest such as the Kalman filter projection pursuit methods density estimation and other computer intensive techniques

*Hyperparameter Tuning for Machine and Deep Learning with R* Eva Bartz,Thomas Bartz-Beielstein,Martin Zaefferer,Olaf Mersmann,2023-01-01 This open access book provides a wealth of hands on examples that illustrate how hyperparameter tuning can be applied in practice and gives deep insights into the working mechanisms of machine learning ML and deep learning DL methods The aim of the book is to equip readers with the ability to achieve better results with significantly less

time costs effort and resources using the methods described here The case studies presented in this book can be run on a regular desktop or notebook computer No high performance computing facilities are required The idea for the book originated in a study conducted by Bartz four parameter tuning studies and one extensive global parameter tuning study statistical analysis of the performance of ML and DL methods based on severity and a new consensus ranking based way to aggregate and analyze results from multiple algorithms The book presents analyses of more than 30 hyperparameters from six relevant ML and DL methods and provides source code so that users can reproduce the results Accordingly it serves as a handbook and textbook alike *Applications of Human Performance Models to System Design* Grant R. McMillan,David Beevis,Eduardo Salas,2013-06-29 The human factors profession is currently attempting to take a more proactive role in the design of man machine systems than has been character istic of its past Realizing that human engineering contributions are needed well before the experimental evaluation of prototypes or operational systems there is a concerted effort to develop tools that predict how humans will interact with proposed designs This volume provides an over view of one category of such tools mathematical models of human performance It represents a collection of invited papers from a 1988 NATO Workshop The Workshop was conceived and organized by NATO Research Study Group 9 RSG 9 on Modelling of Human Operator Behaviour in Weapon Systems It represented the culmination of over five years of effort and was attended by 139 persons from Europe Canada and the United States RSG 9 was established in 1982 by Panel 8 of the Defence Research Group to accomplish the following objectives Determine the utility and state of the art of human performance modelling Encourage international research and the exchange of ideas Foster the practical application of modelling research Provide a bridge between the models and approaches adopted by engineers and behavioral scientists Present the findings in an international symposium *Data Mining and Mathematical Programming* Panos M. Pardalos,Pierre Hansen,2008-04-09 Data mining aims at finding interesting useful or profitable information in very large databases The enormous increase in the size of available scientific and commercial databases data avalanche as well as the continuing and exponential growth in performance of present day computers make data mining a very active field In many cases the burgeoning volume of data sets has grown so large that it threatens to overwhelm rather than enlighten scientists Therefore traditional methods are revised and streamlined complemented by many new methods to address challenging new problems Mathematical Programming plays a key role in this endeavor It helps us to formulate precise objectives e g a clustering criterion or a measure of discrimination as well as the constraints imposed on the solution e g find a partition a covering or a hierarchy in clustering It also provides powerful mathematical tools to build highly performing exact or approximate algorithms This book is based on lectures presented at the workshop on Data Mining and Mathematical Programming October 10 13 2006 Montreal and will be a valuable scientific source of information to faculty students and researchers in optimization data analysis and data mining as well as people working in computer science engineering and applied mathematics **Integrated Computer-Aided Design**

**of Mechanical Systems** Shaker A. Meguid,2012-12-06 In this book the author has presented an introduction to the practical application of some of the essential technical topics related to computer aided engineering CAE These topics include interactive computer graphics ICG computer aided design CAD computer and computer integrated manufacturing CIM aided analysis CAA Unlike the few texts available the present work attempts to bring all these seemingly specialised topics together and to demonstrate their integration in the design process through practical applications to real engineering problems and case studies This book is the result of the author s research and teaching activities for several years of postgraduate and undergraduate courses in mechanical design of rotating machinery computer aided engineering of finite elements solid mechanics engineering practical applications and properties of materials at Cranfield Institute of dynamics Technology Oxford Engineering Science and the University of Manchester Institute of Science and Technology UMIST It was soon realised that no books on the most powerful and versatile tools available to engineering designers existed To satisfy this developing need this book on the use of computers to aid the design process and to integrate design analysis and manufacture was prepared
