## **Introduction To Information Systems 14th Edition:**

*Information System Adoption* Truongsinh Tran, Chi-Trung Hoang, 2011-04 SMEs play an important role in economies including Vietnam. The need for ISs is now necessary in every enterprise. Most of published studies on information systems have been conducted in developed countries with little in developing or less developed countries. From those few there was no one focusing in Vietnam. This book examines the experiences of 7 Vietnamese SMEs when they adopted ISs. The authors investigated the reasons for the process of and the factors influencing information system adoption. The qualitative research method was used to answer research questions. Semi structured interviews, content analysis and open coding were used as the data collection and analysis tool to explore participants experiences. The analysis resulted in important findings. It confirmed some reasons and factors found in the literature concerning information system adoption in Vietnamese small and medium enterprises. Despite some similarities the authors found some differences such as government role concerning the information system adoption. The results confirmed some factors and reasons but also brought up some new ones. We suggest therefore some further studies on those.

**Formal Ontology in Information Systems** Nathalie Aussenac-Gilles, T. Hahmann, Antony Galton, 2024-01-15. FOIS is the flagship conference of the International Association for Ontology and its Applications, a non-profit organization which promotes interdisciplinary research and international collaboration at the intersection of philosophical ontology, linguistics, logic, cognitive science, and computer science. This book presents the papers delivered at FOIS 2023, the 13th edition of the Formal Ontology in Information Systems conference. The event was held as a sequentially hybrid event, face-to-face in Sherbrooke, Canada, from 17 to 20 July 2023, and online from 18 to 20 September 2023. In total, 62 articles from 19 different countries were submitted, out of which 25 were accepted for inclusion in the conference and for publication, corresponding to an acceptance rate of 40 percent. The contributions are separated into the book's three sections: 1. Foundational ontological issues, 2. Methodological issues around the development, alignment, verification, and use of ontologies, and 3. Domain ontologies and ontology-based applications. In these sections, ontological aspects from a wide variety of fields are covered, primarily from various engineering domains including cybersecurity, manufacturing, petroleum engineering, and robotics, but also extending to the humanities, social sciences, medicine, and dentistry. A noticeable trend among the contributions in this edition of the conference is the recognition that improving the tools to analyze, align, and improve ontologies is of paramount importance in continuing to advance the field of formal ontology. The book will be of interest to all formal and applied ontology researchers and to those who use formal ontologies and information systems, as
