Hüllermeier,2010-11-19 The topic of preferences is a new branch of machine learning and data mining and it has attracted considerable attention in artificial intelligence research in previous years It involves learning from observations that reveal information about the preferences of an individual or a class of individuals Representing and processing knowledge in terms of preferences is appealing as it allows one to specify desires in a declarative way to combine qualitative and quantitative modes of reasoning and to deal with inconsistencies and exceptions in a flexible manner And generalizing beyond training data models thus learned may be used for preference prediction This is the first book dedicated to this topic and the treatment is comprehensive The editors first offer a thorough introduction including a systematic categorization according to learning task and learning technique along with a unified notation The first half of the book is organized into parts on label ranking instance ranking and object ranking while the second half is organized into parts on applications of preference learning in multiattribute domains information retrieval and recommender systems The book will be of interest to researchers and practitioners in artificial intelligence in particular machine learning and data mining and in fields such as multicriteria decision making and operations research
