In the broadest sense, it will help the reader create better, faster, and more reliable software by deepening their understanding of available tools, language features, techniques, and design patterns. Every developer who previously worked with C will enjoy the in-depth chapter on important changes in the language from C 11 up to and including C 20. In contrast to many resources on Modern C that present new features only in small, isolated examples, this book represents a more holistic approach: readers will understand the relevance of new features and how they interact in the context of a large

software project and not just within a toy example Previous experience in creating software with C is highly recommended to fully appreciate these aspects SeqAn3 is a new re designed software library The conception and implementation process is detailed in this book including a critical reflection on the previous versions of the library This is particularly helpful to readers who are about to create a large software project themselves or who are planning a major overhaul of an existing library or framework While the focus of the book is clearly on software development and design it also touches on various organisational and administrative aspects like licensing dependency management and quality control

Redish,M.

Vicentini,2004-08-09 Physics Education research is a young field with a strong tradition in many countries However it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science communication science history and philosophy The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments the issue of assessment and cultural aspects Information is also given on the organizations involved in connecting various aspects of Physics Education the International Commission on Physics Education the European Physical Society and the European Physics Education Network
