

## Magnetism

### What is a Magnet?

A magnet is something that can attract metal or another magnet. A magnet can also repel another magnet.

### Properties of magnets:

- Magnets have two opposite poles: north and south.
- If divided, each part of a magnet will also have a north and south pole (you can never make an unpaired pole)
- Magnets exert forces on other magnets, called "Magnetic forces"
- Opposite poles attract (North attracts South)  
 Like poles repel (North repels North, etc)

### Permanent and Temporary Magnets

*Iron makes the best temporary magnets.  
 Only lodestone and magnetite are permanent magnets.*

**Permanent magnet** – a magnet that retains its magnetism and does not need to be "recharged." *Lodestone* and *magnetite* are the only two permanent magnetic substances.

**Temporary magnet** – a magnet that occurs when near a permanent magnet, but loses its magnetism away from the permanent magnet, many metals can be temporary magnets.

### Electromagnets

**Electromagnet**—a magnet made from electricity. When electricity flows it causes magnetism.

**Best use of an electromagnet**—we can turn it on and off.  
 Toasters, doorbells: any job needing a force on command needs an electromagnet.

#### A simple electromagnet

#### Strengthening an electromagnet –

- Increase electricity*
  - more batteries or stronger battery.
- Increase number of coils*
  - actually adds electricity, too.
- Add iron to the core* (center of electromagnetic)
  - the iron amplifies the electromagnetic field.

**Second best use of an electromagnet**—we can control how much force we need by increasing or decreasing the electricity.

### How do Magnets Work?

*Spinning electrons cause magnetism.*

**Permanent magnets**—all of the electrons in an atom are spinning the same way and the little electromagnetic add up.

**Temporary magnets**—the electrons can switch to spin in the same way when near a magnet, but will fall back after the magnet leaves.

Any magnet will reach inside the magnetic field (the arrows)

The arrows show the direction a North pole would move in the magnetic field.

### Magnetic Fields

**Magnetic Field**—the area in which a magnet or piece of metal feels the force of another magnet.

#### Rules for magnetic fields—

- drawn from North pole to South pole;
- closer or more arrows = stronger field.
- any magnet will react in a magnetic field.
- every magnet creates a magnetic field.

The magnet of a compass reacts to the Earth's magnetic field to point to magnetic north (in Canada), not true north (the North Pole).

The *Collected Works on Magic Witchcraft* is a comprehensive anthology that weaves together the transformative journey of esoteric knowledge from the medieval era through the nineteenth century. With a palette of literary styles ranging from Gothic narratives and historical treatises to philosophical discourses, this collection provides a profound exploration of magic and witchcraft's enigmatic allure. The diversity of the anthology is underscored by its inclusion of pivotal pieces that examine the multifaceted nature of superstition, folklore, and the supernatural, creating a dialogue that reflects the zeitgeist of literary fascination with the otherworldly. Curated by a team of notable authors and scholars, including Bram Stoker, Walter Scott, and Margaret Murray, *The Collected Works on Magic Witchcraft* assembles voices that span diverse cultural and historical backgrounds. These contributions span the Gothic revival, Enlightenment, rationalism, and Romanticism, unified by their quest to unearth and interrogate humanity's perpetual intrigue with the mystical and the arcane. This anthology aligns with and enriches the discourse on the cultural zeitgeist of each respective era, revealing magic and witchcraft as socio-political tools, reflections of societal fears, and as paths to personal enlightenment. Readers will find in this anthology a unique opportunity to delve into a rich tapestry of perspectives and literary interpretations. It caters to scholars, enthusiasts, and curious readers alike, offering invaluable insights into the myriad ways magic and witchcraft have influenced literature and society. This compendium stands as a significant repository of intellectual and cultural dialogue, highlighting the perennial nature of these themes and fostering a deeper understanding of their enduring power and influence across changing times and societies.

**Electrical World** ,1885      Hans Christian Ørsted and the Romantic Legacy in Science Robert M. Brain,Robert S. Cohen,Ole Knudsen,2007-09-28

This volume owes its origin to the perception of a puzzling paradox. Hans Christian Ørsted, the great Danish scientist and philosopher, was one of the founders of modern physics through his experimental discovery in 1820 of the interaction of electricity and magnetism, a key step and model for the further unification of the forces of nature. Followers such as Maxwell and Einstein were, and today's searchers worldwide are enchanted by the hope for a completion of that grand program. In addition to Ørsted's discovery of electromagnetism, his work in science included other fields, chiefly high pressure physics and acoustics. Moreover, he belonged to that fascinating group of seekers who were deeply engaged in the Romantic tradition of the Nature Philosophers.

influenced by Immanuel Kant and by religious literary and aesthetic currents The scientific and philosophical speculations by rsted and his circle also quickly stimulated the imagination of other philosophers and scientists Among the latter were prominently Andr Marie Amp re and Michael Faraday whose work launched the transformation of civilization often called the Second Ind trial Revolution based on the invention of motors generators and the pervasi ness of electricity in modern life
