Approximation Methods and Analytical Modeling Using Partial Differential Equations Tamara Fastovska, Yurii Kolomoitsev, Kateryna Buryachenko, Marina Chugunova,2025-03-28 Adequate mathematical modeling is the key to success for many real world projects in engineering medicine and other applied areas As soon as an appropriate mathematical model is developed it can be comprehensively analyzed by a broad spectrum of available mathematical methods For example compartmental models are widely used in mathematical epidemiology to describe the dynamics of infectious diseases and in mathematical models of population genetics While the existence of an optimal solution under certain condition can be often proved rigorously this does not always mean that such a solution is easy to implement in practice Finding a reasonable approximation can in itself be a challenging research problem This Research Topic is devoted to modeling analysis and approximation problems whose solutions exploit and explore the theory of partial differential equations It aims to highlight new analytical tools for use in the modeling of problems arising in applied sciences and practical areas Researchers are invited to submit articles that investigate the qualitative behavior of weak solutions removability conditions for singularities the dependence of the local asymptotic property of these solutions on initial and boundary data and also the existence of solutions Contributors are particularly encouraged to focus on anisotropic models analyzing the preconditions on the strength of the anisotropy and comparing the analytical estimates for the growth behavior of the solutions near the singularities with the observed growth in numerical simulations The qualitative analysis and analytical results should be confirmed by the numerically observed solution behavior Artificial Intelligence in Education Ning Wang,Genaro Rebolledo-Mendez,Noboru Matsuda,Olga C. Santos,Vania Dimitrova,2023-06-25 This book constitutes the refereed proceedings of the 24th International Conference on Artificial Intelligence in Education AIED 2023 held in Tokyo Japan during July 3 7 2023 This event took place in hybrid mode The 53 full papers and 26 short papers presented in this book were carefully reviewed and selected from 311 submissions The papers present result in high quality research on

intelligent systems and the cognitive sciences for the improvement and advancement of education The conference was hosted by the prestigious International Artificial Intelligence in Education Society a global association of researchers and academics specializing in the many fields that comprise AIED including but not limited to computer science learning sciences and education
