Eggermont, Vincent N.

LaRiccia, 2009-06-02 This is the second volume of a text on the theory and practice of maximum penalized likelihood estimation It is intended for graduate students in statistics operations research and applied mathematics as well as researchers and practitioners in the field The present volume was supposed to have a short chapter on nonparametric regression but was intended to deal mainly with inverse problems However the chapter on nonparametric regression kept growing to the point where it is now the only topic covered Perhaps there will be a Volume III It might even deal with inverse problems But for now we are happy to have finished Volume II The emphasis in this volume is on smoothing splines of arbitrary order but other estimators kernels local and global polynomials pass review as well We study smoothing splines and local polynomials in the context of reproducing kernel Hilbert spaces The connection between smoothing splines and reproducing kernels is of course well known The new twist is that letting the inner product depend on the smoothing parameter opens up new possibilities It leads to asymptotically equivalent reproducing kernel estimators without qualifications and thence via uniform error bounds for kernel estimators to uniform error bounds for smoothing splines and via strong approximations to confidence bands for the unknown regression function It came as somewhat of a surprise that reproducing kernel Hilbert space ideas also proved useful in the study of local polynomial estimators **Operations and Supply Chain Management** Roberta S. Hormones and Economic Behavior Pablo Brañas-Garza, Levent Neyse, Martin Voracek, Ulrich Schmidt, Monica Capra, 2019-01-29 Behavioral correlates of hormones emphasized by psychologists have captured the attention of economists in the past years Behavioral economists in particular have investigated the possible roles of hormones on economic decision making and behavior as well as social preferences and cognitive abilities Testosterone oxytocin dopamine serotonin and stress hormones are the foremost studied ones in economic contexts Yet the results are mixed and the relationship between hormones and economic behavior is under investigated to this date Hormone levels are measurable and manipulatable e.g. activate or block The fact that behavioral economics also employs experimental methodology makes it possible to observe both correlational and causal relationships between hormones and economic behavior Since numerous environmental social and biological factors interact with hormone fluctuations capturing the true impacts of hormones on decisions and behavior is challenging Manipulating hormone levels in the body is a method that is used to tackle this issue Such studies compare observed behaviors of hormones or placebo administered participants to determine causal relationships This Research Topic welcomes the studies on the direct or indirect correlates of hormones on economic behavior and decision making to create new insights on the economic consequences of endocrine activity **IBM AIX**
