Time and the Warm Body David L. Burrows, 2007 This study deals with time and with music and the link between the two is the suggestion that music is a modeling of the way we construct time Time the now duration succession and order of succession the past the future is seen as a resource for managing systemic disequilibrium and as the evolutionary elaboration of the now As organic dynamical systems humans maintain themselves by means of self regulatory actions nows and these nows are proposed as feeding off a pre temporal interindividually accessed energy in nature an ongoing cosmic proto present Speech is a way out of sensory immediacy and a way into a complex shared world where coordination and planning take place away from the distractions of the present as given by the senses Music is presented as one of a group of behaviors comprising the arts and games that evolved in parallel with language to compensate for its abstractness Language tends to the complexly abstract and music favors the complex sensorially concrete like speech music operates on a synthetic plane but provides synthetic occasions for sensory immediacy at a level of complexity to match that of language

A Fractal Epistemology for a Scientific Psychology Terry Marks-Tarlow, Yakov Shapiro, Kathe P. Wolf, Harris L. Friedman, 2020-01-06 Fractal dynamics provide an unparalleled tool for

understanding the evolution of natural complexity throughout physical biological and psychological realms This book s conceptual framework helps to reconcile several persistent dichotomies in the natural sciences including mind brain linear nonlinear subjective objective and even personal transpersonal processes A fractal approach is especially useful when applied to recursive processes of consciousness both within their ordinary and anomalous manifestations This novel way to study the interconnection of seemingly divided wholes encompasses multiple dimensions of experience and being It brings together experts in diverse fields neuropsychologists psychiatrists physicists physiologists psychoanalysts mathematicians and professors of religion and music composition to demonstrate the value of fractals as model method and metaphor within psychology and related social and physical sciences The result is a new perspective for understanding what has often been dismissed as too subjective idiosyncratic and ineffably beyond the scope of science bringing these areas back into a natural scientific framework
