

Best Practices on Oil and Gas Methane Emissions Regulations

A FACTSHEET FOR POLICY-MAKERS

"Canada's three major oil and gas provinces – Alberta, Saskatchewan, and B.C. have all written their own rules. The federal government must now stand its ground and ensure that the provincial rules are as effective as the federal ones."

The Government of Canada, in concert with Mexico and the U.S., reaffirmed its commitment to reduce methane emissions from the oil and gas sector by 40 to 45 percent below 2012 levels by 2025 as part of the Pan-Canadian Framework. In April 2018, the Canadian federal government published robust and comprehensive regulations intended to achieve this commitment. Addressing methane is one of the most cost effective ways to reduce greenhouse gas pollution from the oil and gas sector.

The provinces can introduce their own regulations if they achieve equivalent emissions reductions as the federal ones. Canada's three major oil and gas provinces – Alberta, Saskatchewan, and B.C. have all written their own rules. The federal government must now stand its ground and ensure that the provincial rules are as effective as the federal ones.

Why Methane?

Methane is a potent greenhouse gas with almost 100 times the climate warming impact of carbon dioxide over a 20-year timespan. Methane is responsible for approximately 25% of the warming we feel today.¹ These facts make near-term methane reductions a necessary element of international efforts to battle climate change.

Methane is also the primary constituent of natural gas—a valuable product. Actions that eliminate or reduce methane losses to the atmosphere therefore are highly cost effective as fewer methane emissions translate to more product in the pipeline. The International Energy Agency says globally the oil and gas industry can cost-effectively reduce up to 75% of its methane emissions, and 50% of global methane reductions can be realized at zero net cost. This level of reduction delivers the same long-term climate
