

CRITERIA	POSSIBLE DESIGN SOLUTION 2		POSSIBLE DESIGN SOLUTION 1	
Design is simple and easy to use , without unnecessary complexities – application has been simplified from original design.	The design is structured at a 90 degree angle, allowing for easier application for the user. The design is straight forward and uncomplicated. Design was not simplified from original, but it's application was made easier for the user.	3	The design is a combination of 4 adequately sized metal plates, shaped triangularly, with the smallest points placed towards the middle. The design lacks complexities such as unnecessary parts and figures. Design wasn't simplified, but application was made easier for the user.	3
Design is power efficient with high functionality without unnecessary exertion by user using basic lever systems to multiply force.	The 90 degree angled structure of the design ensures that less effort is put for more load as the user turns the main screw. The plastic at the end of the handle is secured at both ends but is loosely fit around the iron body of the handle, to make it even more easier to turn. Multiplication of force.	4	The triangular shape of the metal plates exerts all force and pressure on of the larger shapes, while the thin midsection parts are merely used for control. The ratio of effort and load is more or less equal to each other – the difference isn't great.	3
The design is cost effective while remaining at it's maximum efficiency in terms to appeal and work. Different materials used have a set purpose in function and or appeal to user	The materials used for the structure is wrought iron and plastic around the end of the handle. However, not just the iron body requires material., but the plastic handle as well, which is extra cost.	3	The only material required for this design is wrought iron. This is very cost efficient and effective whilst maintaining style and high functionality.	4
The design has a durability guarantee ; the structure and materials used for the design including paint have ensured durability and are rust resistant, thus suitable for a workshop environment.	The design is made up of iron, which is not rust resistant, but that is remedied by the oil paint surface of the design. The durability is dependent of the paint.	3	The design is made up of iron which will be oil painted to ensure adequate durability and suitability for the workshop.	3
The design appeals greatly to the user in terms of aesthetics (may include structure, colour, materials etc).and is effective in attracting the user.	The differently structured parts of the design are successful their appeal as they provide a sense of complexity that may attract the user and convey efficiency, but the design remains simple in it's application, despite it's aesthetic.	4	The interesting shape of the design contributes to the entire aesthetic of the design. The entire attraction of the design is based on familiarity. The colour is greatly attracting to the user	3
