1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

2. The next step is to gather information about the problem. This includes checking the logs, checking the hardware, and checking the software.

3. Once the information is gathered, the next step is to analyze the problem. This involves looking at the data and trying to figure out what is causing the problem.

4. The final step is to implement a solution. This involves making changes to the system and testing to see if the problem is fixed.
