Relevant professionals as well as students in a variety of disciplines such as geography and surveying will find this book required reading. This rapidly developing field uses increasingly complex and accurate systems. Today technology enables us to capture geo data in full 3D as well as to disseminate it via the Web at the speed of light. We are able to continuously image the world from space at resolutions of up to 50 cm. Airborne LiDAR laser surveying sensors can be combined with digital camera technology to produce geometrically correct images of the Earth's surface while integrating these with large scale topographic maps and terrestrial as well as aerial images to produce 3D cityscapes that computer users can explore from their desktops.
