Michael Pollan in his best selling *In Defense of Food* Gyorgy Scrinis's concept of nutritionism refers to the reductive understanding of nutrients as the key indicators of healthy food an approach that has dominated nutrition science dietary advice and food marketing Scrinis argues this ideology has narrowed and in some cases distorted our appreciation of food quality such that even highly processed foods may be perceived as healthful depending on their content of good or bad nutrients Investigating the butter versus margarine debate the battle between low fat low carb and other weight loss diets and the food industry's strategic promotion of nutritionally enhanced foods Scrinis reveals the scientific social and economic factors driving our modern fascination with nutrition Scrinis develops an original framework and terminology for analyzing the characteristics and consequences of nutritionism since the late nineteenth century He begins with the era of quantification in which the idea of protective nutrients caloric reductionism and vitamins curative effects took shape He follows with the era of good and bad nutritionism which set nutricentric dietary guidelines and defined the parameters of unhealthy nutrients and concludes with our current era of functional nutritionism in which the focus has shifted to targeted nutrients superfoods and optimal diets Scrinis's research underscores the critical role of nutrition science and dietary advice in shaping our relationship to food and our bodies and in heightening our nutritional anxieties He ultimately shows how nutritionism has aligned the demands and perceived needs of consumers with the commercial interests of food manufacturers and corporations Scrinis also offers an alternative paradigm for assessing the healthfulness of foods the food quality paradigm that privileges food production and processing quality cultural traditional knowledge and sensual practical experience and promotes less reductive forms of nutrition research and dietary advice

The Good Fat Diet Mary Enig, Sally Fallon, 2005-05-05 Since the late 1950s it's been drilled into us that fat is bad saturated fat is worse and tropical fats like coconut and palm are just about as near to poison as a food can be However a new and unprejudiced look at fat research over the last fifty years indicates that the opposite is true and that saturated fats and in particular coconut oil are the healthiest fats you can eat This diet will put you back on the track that nature intended for efficient nourishment This is not a deprivational diet Let go of the notion that you must suffer to lose weight Starving yourself is counter productive as it signals the body to hold fat Instead eating sufficient quantities of the right combinations of fats as outlined in the recipes and menu plans you'll notice that you can go for several hours without eating and without experiencing cravings because the body is satisfied and also has stable blood sugar levels As a result hunger pangs melt away and eating sensibly becomes easy
