Resources in Education, 1995 *The American Biology Teacher*, 2007 **Cumulated Index Medicus**, 1999 *The Feathered World*, 1928 *California Fruit News*, 1911 *Mental Imagery* Joel Pearson, Stephen M. Kosslyn, Our ability to be conscious of the world around us is often discussed as one of the most amazing yet enigmatic processes under scientific investigation today However our ability to imagine the world around us in the absence of stimulation from that world is perhaps even more amazing This capacity to experience objects or scenarios through imagination that do not necessarily exist in the world is perhaps one of the fundamental abilities that allows us successfully to think about plan run a dress rehearsal of future events re analyze past events and even simulate or fantasize abstract events that may never happen Empirical research into mental imagery has seen a recent surge due partly to the development of new neuroscientific methods and their clever application but also due to the increasing discovery and application of more objective methods to investigate this inherently internal and private process As the topic is cross hosted in *Frontiers in Perception Science* and *Frontiers in Human Neuroscience* we invite researchers from different fields to submit opinionated but balanced reviews new empirical theoretical philosophical or technical papers covering any aspect of mental imagery In particular we encourage submissions focusing on different sensory modalities such as olfaction audition somatosensory etc Similarly we support submissions focusing on the relationship between mental imagery and other neural and cognitive functions or disorders such as visual working memory visual search or disorders of anxiety Together we hope that collecting a group of papers on this

research topic will help to unify theory while providing an overview of the state of the field where it is heading and how mental imagery relates to other cognitive and sensory functions

Adolescence Mental Health in School and University Iman Permana, Herni Susanti, 2024-07-29 A school, whether run by the government or a private institution, is established to prepare adolescents for adulthood. In some regions, some religious societies have established a comprehensive educational institution supported by their religious competencies requirement in their curriculum along with the national curriculum. Adolescence is a period of life that ranges from 10 to 19 years old and expands from school to the early phase of university. Adolescents are considered highly susceptible to mental health issues. Anxiety, depression, behavioral disorders, and suicidal attempts have been shown to increase before the age of 24. There is a myriad of factors that can contribute to the development of mental health disorders in this context, including family parenting style and bullying from peers and teachers. Failing to address contributing factors may hinder adolescents from fulfilling and sustaining healthy and productive adult lives.
