Human Boxplot Activity:

Mathematics Lessons to Look Forward To! Jim Noble, 2023-03-01 This book is essential for anyone involved or thinking about being involved in teaching and learning mathematics at school. It is packed full of practical and fun lesson ideas and activities combining the author's infectious enthusiasm for school mathematics with the relentless challenge of engaging students with the nature of the subject. Using humour, enthusiasm and years of teaching expertise, Jim Noble presents the features and potential of ideas and experiments he has used in his classroom. He draws on his extensive experience of using these activities to demonstrate their pros and cons, what you might expect and where they might lead. In a humorous and engaging account alongside noting successes, the author also includes the moments where things have gone slightly awry. These experiences and the context are used as a vehicle for thinking about the broader goals and issues of mathematics education and challenging some of the stereotypical misunderstandings. Each chapter draws out an important idea for teachers to think about following a basic three-part structure: The lesson and how it works, What happens and why it matters, How could it be different. Variations and similar tasks. Without preaching anything other than the joy of mathematics, this intelligent, humorous and practical book will act as a catalyst and inspiration for teachers looking to develop their own understanding and practice.

Statistics Through Applications Daren S. Starnes, David S. Moore, Dan Yates, 2009-12-25 Watch a video introduction [here](#). Statistics Through Applications STA is the only text written specifically for high school statistics course. Designed to be read, the book takes a data analysis approach that emphasizes conceptual understanding over computation while recognizing that some computation is necessary. The focus is on the statistical thinking behind data gathering and interpretation. The high school statistics course is often the first applied math course students take. STA engages students in learning how statisticians contribute to our understanding of the world and helps students to become more discerning consumers of the statistics they encounter in ads, economic reports, political campaigns and elsewhere. New and improved STA 2e features expanded coverage of probability, a reorganized presentation of data analysis, a new color design and much more. Please see the posted sample chapter or request a copy today to see for yourself.
