

Chapter 4

Linear Regression with One Regressor

■ Solutions to Exercises

1. (a) The predicted average test score is

$$\widehat{TestScore} = 520.4 - 5.82 \times 22 = 392.36$$

- (b) The predicted change in the classroom average test score is

$$\Delta \widehat{TestScore} = (-5.82 \times 19) - (-5.82 \times 23) = 23.28$$

- (c) Using the formula for $\hat{\beta}_0$ in Equation (4.8), we know the sample average of the test scores across the 100 classrooms is

$$\widehat{TestScore} = \hat{\beta}_0 + \hat{\beta}_1 \times \overline{CS} = 520.4 - 5.82 \times 21.4 = 395.85.$$

- (d) Use the formula for the standard error of the regression (SER) in Equation (4.19) to get the sum of squared residuals:

$$SSR = (n - 2)SER^2 = (100 - 2) \times 11.5^2 = 12961.$$

Use the formula for R^2 in Equation (4.16) to get the total sum of squares:

$$TSS = \frac{SSR}{1 - R^2} = \frac{12961}{1 - 0.08^2} = 13044.$$

The sample variance is $s_y^2 = \frac{TSS}{n-1} = \frac{13044}{99} = 131.8$. Thus, standard deviation is $s_y = \sqrt{s_y^2} = 11.5$.

2. The sample size $n = 200$. The estimated regression equation is

$$\widehat{Weight} = (2.15) - 99.41 + (0.31) 3.94 Height, \quad R^2 = 0.81, \quad SER = 10.2.$$

- (a) Substituting $Height = 70, 65$, and 74 inches into the equation, the predicted weights are 176.39, 156.69, and 192.15 pounds.

- (b) $\Delta \widehat{Weight} = 3.94 \times \Delta Height = 3.94 \times 1.5 = 5.91$.

- (c) We have the following relations: $1 \text{ in} = 2.54 \text{ cm}$ and $1 \text{ lb} = 0.4536 \text{ kg}$. Suppose the regression equation in the centimeter-kilogram space is

$$\widehat{Weight} = \hat{\gamma}_0 + \hat{\gamma}_1 Height.$$

The coefficients are $\hat{\gamma}_0 = -99.41 \times 0.4536 = -45.092 \text{ kg}$, $\hat{\gamma}_1 = 3.94 \times \frac{2.54}{100} = 0.7036 \text{ kg per cm}$. The R^2 is unit free, so it remains at $R^2 = 0.81$. The standard error of the regression is $SER = 10.2 \times 0.4536 = 4.6267 \text{ kg}$.

Johnston Econometrics Method Chapter 4 Solution:

Solutions Manual for Econometrics Badi H. Baltagi, 2014-09-01 This Third Edition updates the Solutions Manual for Econometrics to match the Fifth Edition of the Econometrics textbook. It adds problems and solutions using latest software versions of Stata and EViews. Special features include empirical examples using EViews and Stata. The book offers rigorous proofs and treatment of difficult econometrics concepts in a simple and clear way and it provides the reader with both applied and theoretical econometrics problems along with their solutions. *Econometric Methods* John Johnston, 1984 In writing this new edition we have had two major objectives. The first is to provide a comprehensive and accessible account of available econometric methods. The second is to illustrate these methods with applications to some real data sets which are given on the data diskette that accompanies the book, thus the reader can replicate the applications in the text experiment with some of the problems suggested at the chapter ends and carry out further analyses of her own choosing. *The Econometric Analysis of Time Series* Andrew C. Harvey, 1990 The Econometric Analysis of Time Series focuses on the statistical aspects of model building with an emphasis on providing an understanding of the main ideas and concepts in econometrics rather than presenting a series of rigorous proofs. **Selected Matrix Topics for Economists** Joseph Havlicek, 1974

Econometrics, 2nd Rev. Ed Badi Hani Baltagi, 1998 This reference introduces the basic econometric methods and the underlying assumptions behind them. It also includes a simple and concise treatment of more advanced topics in time series, spatial correlation, limited dependent variables and panel data models as well as specification testing, Gauss-Newton regressions and regression diagnostics. The strengths of this book lie in presenting difficult material in a simple yet rigorous manner. In addition, the book features a set of empirical illustrations that demonstrate some of the basic results. The empirical exercises are solved using several econometric software packages. **Technical Bulletin**, 1972

Probability, Econometrics and Truth Hugo A. Keuzenkamp, 2000-11-02 When John Maynard Keynes likened Jan Tinbergen's early work in econometrics to black magic and alchemy, he was expressing a widely held view of a new discipline. However, even after half a century of practical work and theorizing by some of the most accomplished social scientists, Keynes' comments are still repeated today. This book assesses the foundations and development of econometrics and sets out a basis for the reconstruction of the foundations of econometric inference by examining the various interpretations of probability theory which underlie econometrics. Keuzenkamp claims that the probabilistic foundations of econometrics are weak and although econometric inferences may yield interesting knowledge, claims to be able to falsify or verify economic theories are unwarranted. Methodological falsificationism in econometrics is an illusion. Instead, it is argued, econometrics should locate itself in the tradition of positivism. **Econometrics Course Materials**, 1981 **Principles of Econometrics** Kong Chu, 1972 *A Method for Farm Planning Under Uncertain Weather Conditions with Applications to Corn-soybean Farming in Southern Minnesota* Richard M. Boisvert, Harald R. Jensen, 1973
