The Daoist Monastic Manual Livia Kohn,2004-07-01 The Fengdao kejie or Rules and Precepts for Worshipping the Dao dates from the early seventh century and is a key text of medieval Daoist priesthood and monasticism which was first formally organized in the sixth century Compiled to serve the needs of both monastic practitioners and priests in training it describes the fundamental rules organizational principles and concrete establishments of Daoist institutions Speaking in their own voices and presenting the ideal Daoist life of their time priests and recluses come to life in this fascinating ancient document Livia Kohn here offers the first complete annotated translation of the Fengdao kejie She begins with three introductory chapters that outline the development of Daoist organizations and institutions discuss the date and compilation of the work and present key issues of terminology and worldview The text itself contains eighteen sections that address the importance of karma and retribution the creation of buildings sacred statues and scriptures the design of sacred utensils and ritual clothing the organization and structure of the ordination hierarchy as well as a number of essential rituals from the recitation of the scriptures to the daily devotions and the ordination ceremony The Daoist Monastic Manual offers a clear and vibrant description of the lifestyle and organizational structures of medieval Daoism rooting the religion in the concrete reality of daily activities **The Official Railway Guide** ,1874 **A Beginner's Guide to Discrete Mathematics** W.D. Wallis,2013-03-14 This text is a basic introduction to those areas of discrete mathematics used by students of mathematics and computer science Introductory courses on this material are now standard at many colleges and universities Usually these courses are of one semester's duration and usually they are offered at the sophomore level Very often this will be the first course where the students see several real proofs The preparation of the students is very mixed and one cannot assume a strong background In particular the instructor should not assume that the students have seen a linear algebra course or any introduction to number systems that goes beyond college algebra In view of this I have tried to avoid too much sophistication while still retaining rigor I hope I have included enough problems so that the student can reinforce the concepts Most of the problems are quite easy with just a few difficult exercises scattered through the text If the class is weak a small number of sections will be too hard while the instructor who has a strong class will need to include some supplementary material I think this is preferable to a book at a higher mathematical level which will scare away weaker students **Gray's New Book of Roads.
