50. You are a nurse practitioner. Your patient has the following symptoms, which you wrote down in the table below. Complete the table, so that you can explain the source of the problem.

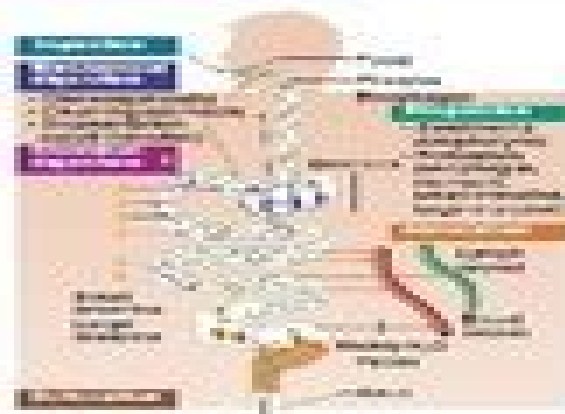

Symptoms	Likely location/organ	Potential causes
Patient is having difficulty eliminating waste, and pain in lowest regions of digestive system		Swollen veins, making eliminating waste from this organ difficult Sitting too long, not enough blood/oxygen getting to organ
Patient reports difficulty swallowing food because this part of her digestive system is swollen		Tonsillitis or one throat/bacterial or viral infection
Patient reports sharp pains in this organ typically during the work day, but less when he returns home. Biopsy reveals tissue lining in this organ is being dissolved by acid.		Acid indigestion is dissolving the tissue lining of this organ/stomach, possibly due to stressful work environment or too much acid in his diet.

The Digestive System and Body Metabolism

• Digestion

• The system follows 6 steps:

1. Ingestion
2. Digestion
3. Absorption of nutrients
4. Chemical digestion
5. Absorption
6. Excretion

61. Analyze the slide to the left. Create a flashcard or draw a Venn Diagram to compare and contrast mechanical digestion with chemical digestion.

Insights in Systems Biology Research Gary An,Ioannis P. Androulakis,Eric H. Chang,Rongling Wu,Shayn Peirce-Cottler ,Edoardo Saccenti,2025-06-10 Summary of Topic This collection represents an interdisciplinary exploration of systems biology and systems medicine integrating advanced methodologies from computational modeling deep neural networks and multiomics to improve understanding and treatment of human diseases and biological mechanisms Emphasis is placed on cutting edge technologies including deep learning for statistical inference from gene expression data and noncoding genetic variants quantitative systems pharmacology for virtual patient generation and semi mechanistic modeling applied to novel therapies such as CAR T cell interventions The articles further highlight disease modeling across various scales exemplified through multi scale simulation frameworks applied to complex conditions such as COVID 19 long term sequelae rheumatoid arthritis epilepsy and tuberculosis Additionally the importance of modularity in biological networks developments in functional annotation of microbial transporters and new approaches towards bioengineered bacterial consortia through molecular communication are discussed This collection informs us of the ongoing efforts to harness computational power and biological insights to advance personalized medicine improve therapeutic strategies and deepen our understanding of complex biological phenomena Systems Biology has undergone significant transformations due to the

pioneering efforts of researchers worldwide The discipline now spans several subfields such as Neuroscience Genetics and Genomics Medicine among others each advancing the field in unique ways through innovative technologies and insightful discoveries This evolution is celebrated in a curated collection by Frontiers in Systems Biology which aims to highlight the state of the art developments and set the stage for future inquiries and applications in the field This collection actively showcases the overlap of technology with theoretical advancements creating a broad framework from which new methodologies and strategies are born This Research Topic aims to provide an overview of the most recent progress in Systems Biology It seeks to outline the impacts that the integration of disparate biological research areas can have in solving complex biological problems and advancing human health Without losing sight of the past achievements the goal is to explore the potential of future advancements addressing the challenges that remain at the forefront of this vibrant field The scope of this Research Topic is broadly defined yet focused on areas where significant innovative strides have been made We welcome contributions that emphasize Integrative approaches in Systems Neuroscience Contemporary breakthroughs in Genetics and Genomics The use of Multiscale Mechanistic Modelling to represent biological interfaces Bridging gaps between experimental and computational biology in Translational Systems Biology Enhancing methodologies in Data and Model Integration This collection welcomes contributions from Editorial Board Members or those referred by a board member reflecting on current developments and plotting pathways for upcoming research endeavors Authors are encouraged to engage critically with their fields identifying current challenges and proposing novel solutions to advance the understanding of complex systems within biology
