$$\log_b x = a \Leftrightarrow b^a = x$$

$$\log_9 27 = \boxed{3/2}$$

$$9^x = 27$$

$$(\cancel{3^2})^x = 3^3$$

$$3^{2x} = 3^3$$

$$\rightarrow \frac{2x}{2} = \frac{3}{2}$$

$$x = 3/2$$

Borwein,2013-06-29 Our intention in this collection is to provide largely through original writings an ex tended account of pi from the dawn of mathematical time to the present The story of pi reflects the most seminal the most serious and sometimes the most whimsical aspects of mathematics A surprising amount of the most important mathematics and a signifi cant number of the most important mathematicians have contributed to its unfolding directly or otherwise Pi is one of the few mathematical concepts whose mention evokes a response of recog nition and interest in those not concerned professionally with the subject It has been a part of human culture and the educated imagination for more than twenty five hundred years The computation of pi is virtually the only topic from the most ancient stratum of mathematics that is still of serious interest to modern mathematical research To pursue this topic as it developed throughout the millennia is to follow a thread through the history of mathematics that winds through geometry analysis and special functions numerical analysis algebra and number theory It

offers a subject that provides mathematicians with examples of many current mathematical techniques as well as a palpable sense of their historical development. Terrell, 2019-10-21 A Passage to Modern Analysis is an extremely well written and reader friendly invitation to real analysis An introductory text for students of mathematics and its applications at the advanced undergraduate and beginning graduate level it strikes an especially good balance between depth of coverage and accessible exposition The examples problems and exposition open up a student's intuition but still provide coverage of deep areas of real analysis A yearlong course from this text provides a solid foundation for further study or application of real analysis at the graduate level A Passage to Modern Analysis is grounded solidly in the analysis of  $\mathbb{R}$  and  $\mathbb{R}^n$  but at appropriate points it introduces and discusses the more general settings of inner product spaces normed spaces and metric spaces The last five chapters offer a bridge to fundamental topics in advanced areas such as ordinary differential equations Fourier series and partial differential equations Lebesgue measure and the Lebesgue integral and Hilbert space Thus the book introduces interesting and useful developments beyond Euclidean space where the concepts of analysis play important roles and it prepares readers for further study of those developments. *CALCULUS & DIFFERENTIAL EQUATIONS* B.R.
