

# REPAIR AND TROUBLE SHOOTING

## Electrical

One of the most common causes of poor TV reception in recreational vehicles is in the cable and connections between the antenna, power supply/wall plate and the TV set. Two types of cable are in general use, they are **coaxial cable** and **twinlead**.

**Coaxial cable** is actually a wire within a wire each insulated from the other (no electrical contact). **Twinlead** is simply two wires held together at the edges of a flat piece of plastic insulation. Both types have two conductors which may be made up of a single solid wire or several strands of wire. The outer wire on coaxial cable will be a braid sleeve, a layer of foil or both.

Whatever type used, the two conductors must be continuous from one end of the cable to the other and must not make electrical contact with each other. **Any time these wires are shorted together or broken the antenna system will not work.**

A careful inspection of the cable and connections will probably detect any damage or faulty connections.

**Always disconnect power from antenna system before unhooking either end of cable between antenna and power supply.** Battery voltage is present on this cable and shorting the center conductor to the body of connector could blow a fuse or the light emitting diode in the power supply circuitry.

The pictorial diagram below shows a typical amplified RV antenna and a list of check points. The check points are numbered in the order which will correct the most common faults first.

1. Check operation of TV set when connected to antenna system known to work. Be sure to remove cable at wall plate so band separator and cable are checked at same time. Make sure VHF and UHF connections at back-of-set are correct. See owners manual for TV set.
2. Check connectors on cable to power supply and antenna. Center conductor should extend about 1/8" beyond end of connector. Look inside connector to make sure no braid wires or foil are touching bare center conductor. Check for corrosion around connectors. Proper connector installation instructions are shown on this sheet.
3. Make sure power supply switch is "ON". Light on wallplate will be on if connections are of correct polarity. White wire attaches to Negative side of battery, red connects to Positive. Light will not light if polarity is wrong.
4. Make sure antenna cable is connected to "ANT." jack on wall plate.
5. 300 ohm connections are no-strip screw type. Twinlead should be cut off square do not strip insulation from wires. Loosen screws, insert end under insulation piercing washers and tighten. Washers pierce insulation and make contact with wires.
6. Check for 12VDC at wall plate with trouble light or 12 volt light bulb connected at these points.
7. If you think wire inside of wall may be damaged, substitute another piece of wire long enough to make connection and run directly to antenna. Wire is available at any TV dealer.
