The book presents the entire Java programming language and essential parts of the class libraries: the collection classes, the input/output classes, the stream libraries, and Java 8's facilities for parallel programming and the functional interfaces used for that. Though written informally, the book describes the language in detail and offers many examples. For clarity, most of the general rules appear on left-hand pages with the relevant examples directly opposite on the right-hand pages. All examples are fragments of legal Java programs. The complete, ready-to-run example programs are available on the book's website. This third edition adds material about functional parallel processing of arrays, default and static methods on interfaces, a brief description of the memory model and visibility across concurrent threads, lambda expressions, method reference expressions, and the related functional interfaces and stream processing, including parallel programming and collectors.
