What Every Teacher Needs to Know about

Psychology

David Didau, Nick Rose, 2016-08-12 Much of what we do in classrooms is intuitive steered by what feels right but all too often intuition proves a poor sometimes treacherous guide Although what we know about the workings of the human brain is still pitifully little the science of psychology can and has revealed certain surprising findings that teachers would do well to heed Over the past few decades psychological research has made real strides into understanding how we learn but it is only in the last few years that education has become aware of these insights Part of the problem is a tendency amongst teachers to resist being told what works if it conflicts with intuition Whilst we cannot and should not relinquish our professional judgement in the face of outlandish claims we should at least be aware of what scientists have discovered about learning thinking motivation behaviour and assessment over the past few decades This though is far easier said than done Every year thousands of research papers are published some of which contradict each other How can busy teachers know which research is worth investing time in reading and understanding Here David Didau and Nick Rose attempt to lay out the evidence and theoretical perspectives on what they believe are the most important and useful psychological principles of which teachers ought to be aware That is not to say this book contains everything you might ever need to know there is no way it could it is merely a primer We hope that you are inspired to read and explore some of the sources for yourself and see what other principles can find a home in your classroom Some of what we present may be surprising some dubious but some in danger of being dismissed as blindingly obvious Before embracing or dismissing any of these principles we urge you to interrogate the evidence and think carefully about the advice we offer While nothing works everywhere and everything might work somewhere this is a guide to what we consider the best bets from the realm of psychology

The Art and Science of Training Elaine Biech, 2016-12-01 There are more similarities than differences between how artists and scientists work Both ask countless questions Both search in earnest for answers Both are dedicated to reaching the best results Not so different from today's trainers are they Elaine Biech one of the most highly regarded names in talent development has set out to identify the perfect blend of content mastery and audience insight The result is this highly informative book The Art and Science of Training presents the science for learning and development but it also emphasizes that training success lies in knowing what to do when things don't go as planned Discover how top facilitators always put learners first even when faced with exceptions to the rule the unwilling learner the uninformed supervisor the inappropriate delivery medium or the unmanageable performance challenge And learn why you must understand people not only content to ensure consistently exceptional learning experiences Science is both a body of knowledge and a process Art is the expression of creativity and imagination Where they intersect is the best way to help others learn and grow

The Elements of Instruction Michael H. Molenda, Deepak Prem Subramony, 2020-10-26 The Elements of Instruction provides a common vocabulary and conceptual schema of teaching and learning that is fully applicable to all forms of instruction in our digital-centric era This critical examination of educational technology's contemporary semantics and constructs fills a major gap in the logical foundations of instruction with special attention to the patterns of communication among facilitators learners and resources The book proposes a new framework for organizing research and theory clear concepts and definitions for its basic elements and a new typology of teaching learning arrangements to simplify the selection of optimal conditions for a variety of learning goals As trends in media technology and methodology continue to evolve these historically contextual back-to-basics pedagogical tools will be invaluable to all instructional designers and educational researchers

Evidence-Based Training for Track and Cross Country Coaches Dr. Matthew Buns, Dr. Jediah E. Blanton, Christine E. Pacewicz, 2018-06-30 Evidence-based Training for Track and Cross Country Coaches is designed to help make practice more effective by orienting readers towards the findings of research and in making training decisions based on science It is written primarily for practicing coaches who need to investigate the research relating to a training issue or problem and to share what they learn with athletes The book is also intended for distance runners themselves who also need to interpret findings from the track and cross country literature The goal of this book is to help readers apply research findings into practice This is an important goal because a vast body of information and ideas are contained in the relevant track and cross country research literature Evidence-based Training for Track and Cross Country Coaches provides knowledge and insights that are relevant to virtually any practical problem related to training methods nutrition physiology psychology or biomechanics Coaches who are able to locate and interpret research information
