Geers,2013-06-18 Transformations in wireless connectivity and location aware technologies hold the promise of bringing a
sea change in the way transportation information is generated and used in the future Sensors in the transportation system
when integrated with those in other sectors for example energy utility and health have the potential to foster novel new ways
of improving livability and sustainability The end result of these developments has been somewhat contradictory Although
automation in the transportation environment has become increasingly widespread the level of involvement and active
participation by people in terms of co creation and contribution of information has also increased As a result the following
two major trends have been observed 1 increases in Machine to Machine M2M communications and 2 increases in the
variety and volume of User Generated Content In this transportation paradigm the pervasive use of Information and
Communication Technologies will serve as the foundation for mobility intelligence towards an ubiquitous information
centered mobility environment However many technical and operational questions as well as social management and legal
