#### Introduction

Structurally and functionally, all life has one common feature: all living organisms are composed of cells. The development of this concept began with Robert Hooke's observations of cork tissue and grew more slowly up of small cells. The cell theory using "cells" because their structure consisted of one or more cells. The cell theory is: There are four (4) parts, the cell theory consists. This theory has three principles: (1) All organisms are composed of one or more cells; (2) the cell is the basic living unit of organization; and (3) all cells arise from preexisting cells.

Although cells vary in organization, size, and function, all share three essential features: (1) All possess a plasma membrane defining the boundary of the living material; (2) all contain a region of fluid cytoplasmic matrix; and, (3) include genetic material, and (4) all possess cytoplasm, everything within the plasma membrane that is not part of the cell nucleus.
