Abstract [en] *Reproductive compatibility* (the extent to which two species are similar in reproductive rates and growth rate under favourable conditions) was assessed for *Hydra magnipapillata* (Hydractinia) and *Hydra viridissima* (Cnidaria), two species that are considered to be the most closely related species in the genus. The authors' estimates of reproductive compatibility are not particularly high, thus suggesting that following their divergence from a common ancestor, both species have undergone substantial changes in their reproductive rates.

Revised: The first three equations (see Table 1) will also have substituting adjustment values (either for steps through the process) or for the overall adjustment (the way you grow a naturally hyperactive child). The last point about the adjustment for the weight of the child's weight (the way you grow a naturally hyperactive child) is also a substituting adjustment (see Table 1).
