**Applied Virtual Instrumentation** Roman Baican, Dan S. Neculescu, 2000 This textbook and CD ROM cover the fundamental knowledge and practical solutions required to interface sensors with a PC using the framework of virtual instrumentation The authors focus on the knowledge required by a non specialist to develop a modern monitoring system for example connect sensors to a PC condition their signals when required

and store and process the data using digital signal processing subroutines available in commercial virtual instrumentation packages

**Rheology and Fourier-Transform Rheology on Water-Based Systems** Christopher Klein, 2008 The influence of shear fields on water based systems was investigated within this thesis The non linear rheological behaviour of spherical and rod like particles was examined with Fourier Transform rheology under LAOS conditions As a model system for spherical particles two different kinds of polystyrene disper sions with a solid content higher than 0.3 each were synthesised within this work Due to the differences in polydispersity and Debye length differences were also found in the rheology In the FT rheology both kinds of dispersions showed a similar rise in the intensities of the magnitudes of the odd higher harmonics which were predicted by a model The in some cases additionally appearing second harmonics were not predicted A novel method to analyse the time domain signal was developed that splits the time domain signal up in four characteristic functions Those characteristic functions correspond to rheological phenomena In some cases the intensities of the Fourier components can interfere negatively FD virus particles were used as a rod like model system which already shows a highly non linear behaviour at concentrations below 1 % wt Predictions for the dependence of the higher harmonics from the strain amplitude described the non linear behaviour well at large but not so good at small strain amplitudes Additionally the trends of the rheological behaviour could be described by a theory for rod like particles An existing rheo optical set up was enhanced by reducing the background birefringence by a factor of 20 and by increasing the time resolution by a factor of 24 Additionally a combination of FT rheology and rheo optics was achieved The influence of a constant shear field on the crystallisation process of zinc oxide in the presence of a polymer was examined The crystallites showed a reduction in length by a factor of 2 The directed addition of polymers in combination with a defined shear field can be an easy way for a defined change of the form of crystallites
