Digital Signal Processing for Multimedia Systems Keshab K. Parhi, Takao Nishitami, 2018-10-03 Addresses a wide selection of multimedia applications programmable and custom architectures for the implementations of multimedia systems and arithmetic architectures and design methodologies The book covers recent applications of digital signal processing algorithms in multimedia presents high speed and low priority binary and finite field arithmetic architectures details VHDL based implementation approaches and more *Custom Memory Management Methodology* Francky Catthoor, Sven Wuytack, G.E. de Greef, Florin Banica, Lode Nachtergaele, Arnout Vandecappelle, 2013-03-09 The main intention of this book is to give an impression of the state of the art in system level memory management data transfer and storage related issues for complex data dominated real time signal and data processing applications The material is based on research at IMEC in this area in the period 1989 1997 In order to deal with the stringent timing requirements and the data dominated characteristics of this domain we have adopted a target architecture style and a systematic methodology to make the exploration and optimization of such systems feasible Our approach is also very heavily application driven which is illustrated by several realistic demonstrators partly used as red thread examples in the book Moreover the book addresses only the steps above the traditional high level synthesis scheduling and allocation or compilation traditional or ILP oriented tasks The latter are mainly focussed on scalar or scalar stream operations and data where the internal structure of the complex data types is not exploited in contrast to the approaches discussed here The proposed methodologies are largely independent of the level of programmability in the data path and controller so they are valuable for the realisation of both hardware and software systems Our target domain consists of signal and data processing systems which deal with large amounts of data

Research in Progress United States. Army Research Office, 1990 Vols for 1977 consist of two parts Chemistry biological sciences engineering sciences metallurgy and materials science issued in the spring and Physics electronics mathematics geosciences issued in the fall **Data Access and Storage Management for Embedded Programmable Processors** Francky Catthoor, K. Danckaert, K.K. Kulkarni, E. Brockmeyer, Per Gunnar Kjeldsberg, T. van Achteren, Thierry Omnes, 2013-03-14 Data Access and Storage Management for Embedded Programmable Processors gives an overview of the state of the art in system level data access and storage management for embedded programmable processors The targeted application domain covers complex embedded real time multi media and communication applications Many of these applications are data dominated in the sense that their cost related aspects namely power consumption and footprint are heavily influenced if not dominated by the data access and storage aspects The material is mainly based on research at IMEC in this area in the period 1996 2001 In order to deal with the stringent timing requirements and the data dominated characteristics of this domain we have adopted a target architecture style that is compatible with modern embedded processors and we have developed a systematic step wise methodology to make the exploration and optimization of such

applications feasible in a source to source precompilation approach **Research in Progress** ,1990 **Journal of VLSI Signal Processing Systems for Signal, Image, and Video Technology** ,1997 VLSI Implementations for Image Communications P. Pirsch,2014-06-28 The past few years have seen a rapid growth in image processing and image communication technologies New video services and multimedia applications are continuously being designed Essential for all these applications are image and video compression techniques The purpose of this book is to report on recent advances in VLSI architectures and their implementation for video signal processing applications with emphasis on video coding for bit rate reduction Efficient VLSI implementation for video signal processing spans a broad range of disciplines involving algorithms architectures circuits and systems Recent progress in VLSI architectures and implementations has resulted in the reduction in cost and size of video signal processing equipment and has made video applications more practical The topics covered in this volume demonstrate the increasingly interdisciplinary nature of VLSI implementation of video signal processing applications involving interactions between algorithms VLSI architectures circuit techniques semiconductor technologies and CAD for microelectronics Pipelined Lattice and Wave Digital Recursive Filters Jin-Gyun Chung,Keshab K. Parhi,2012-12-06 Pipelined Lattice and Wave Digital Recursive Filters uses look ahead transformation and constrained filter design approaches It is also shown that pipelining often reduces the roundoff noise in a digital filter The pipelined recursive lattice and wave digital filters presented are well suited where increasing speed and reducing area or power or roundoff noise are important Examples are wireless and cellular codec applications where low power consumption is important and radar and video applications where higher speed is important The book presents pipelining of direct form recursive digital filters and demonstrates the usefulness of these topologies in high speed and low power applications It then discusses fundamentals of scaling in the design of lattice and wave digital filters Approaches to designing four different types of lattice digital filters are discussed including basic one multiplier normalized and scaled normalized structures The roundoff noise in these lattice filters is also studied The book then presents approaches to the design of pipelined lattice digital filters for the same four types of structures followed by pipelining of orthogonal double rotation digital filters which eliminate limit cycle problems A discussion of pipelining of lattice wave digital filters follows showing how linear phase narrow band sharp transition recursive filters can be implemented using this structure This example is motivated by a difficult filter design problem in a wireless codec application Finally pipelining of ladder wave digital filters is discussed Pipelined Lattice and Wave Digital Recursive Filters serves as an excellent reference and may be used as a text for advanced courses on the subject **Light Propagation in Periodic Media** Michel Neviere,Evgeny Popov,2018-10-03 Based on more than 30 years of research on differential theories of gratings this book describes developments in differential theory for applications in spectroscopy acoustics X ray instrumentation optical communication information processing photolithography high power lasers high precision engineering and astronomy Introducing the Fast Fourier Factorization approach to improve

the convergence of a truncated series the book examines multilayers stacked gratings crossed gratings photonic crystals and isotropic and anisotropic materials techniques and examples in grating design and Maxwell equations in a truncated Fourier space **VLSI Signal Processing, VIII IEEE Signal Processing Society, 1995** **EUROMICRO 99, Proceedings of the 25th EUROMICRO Conference** ,1999 Annotation This is a two volume set of the proceedings of the September 1999 conference on the current and future developments in informatics theories and application areas Volume I 80 contributions discusses digital system design architectures and methods and tools Volume II 30 contributions covers music technology and audio processing dependable computing systems software process and product improvement multimedia and telecommunication and network computing Lacks a subject index Annotation copyrighted by Book News Inc Portland OR

Algorithms for VLSI Design Automation Sabih H. Gerez, 1999-01-05 Modern microprocessors such as Intel's Pentium chip typically contain many millions of transistors They are known generically as Very Large Scale Integrated VLSI systems and their sheer scale and complexity has necessitated the development of CAD tools to automate their design This book focuses on the algorithms which are the building blocks of the design automation software which generates the layout of VLSI circuits Courses on this area are typically elective courses taken at senior undergrad or graduate level by students of Electrical and Electronic Engineering and sometimes in Computer Science or Computer Engineering Scientific and Technical Aerospace Reports ,1994 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **High-Performance VLSI Signal Processing Innovative Architectures and Algorithms, Algorithms and Architectures** K.
