Parent, 2013-06-29 In contrast to the effortless ease with which human beings control their limbs the design of controllers for robotic manipulator arms is a detailed meticulous business Motors controlling the arms need to be started and stopped at just the right moment so that the performance demanded by the user may be achieved at the end of a complicated manoeuvre And yet the same user wishes to express the task for the robot in the simplest possible terms without reference to the minute details of control sequences that his task demands It is the design of such interfaces between man and machine that is the subject of this volume Parent and Laugeau develop the subject in a direct and logical order They first explain the principles of maximal effort control which not only ensure that motors are driven to provide high accuracy but also that this should be done with the least waste of energy and in the shortest possible time In this context they describe the operation of pneumatic logical devices that make rapid decisions at power levels that exceed by several orders those that can be achieved with electronic devices They achieve this whilst keeping the reader aware of the logical principles that are involved in the design of master control units the devices responsible for appropriate actions being taken as a function of time *Structural Stability And Dynamics, Volume 1 (With Cd-rom) - Proceedings Of The Second International Conference* Chien Ming Wang, Gui-rong Liu, Kok Keng Ang, 2002-12-05 ICSSD 2002 is the second in the series of International Conferences on Structural Stability and Dynamics which provides a forum for the exchange of ideas and experiences in structural stability and dynamics among academics engineers scientists and applied mathematicians Held in the modern and vibrant city of Singapore ICSSD 2002 provides a peep at the areas which experts on structural stability and dynamics will be occupied with in the near future From the technical sessions it is evident that well known structural stability and dynamic theories and the computational tools have evolved to an even more advanced stage Many delegates from diverse lands have contributed to the ICSSD 2002 proceedings along with the participation of colleagues from the First Asian Workshop on Meshfree Methods and

programming and parallelism The effort to apply logic programming to large scale realistic problems is another important subject of these proceedings Broken Symmetry in Curved Spacetime and Gravity Charles D. Lane, 2020-11-13 This book contains several recent articles written about broken spacetime symmetry The context is curved spacetime as used in General Relativity and the broken symmetry most discussed is Local Lorentz Symmetry While there is currently no experimental evidence for broken Lorentz symmetry in nature it is an object of great study from theoretical phenomenological and experimental perspectives All three appear in this volume There are three review articles in this volume Fabian Kislak summarizes astrophysical probes of Lorentz violation especially those using polarized light Michael Seifert discusses a particular limit of the Standard Model Extension that is useful for relating theoretical and experimental ideas and Marco Schreck describes circumstances under which gravitational Cerenkov radiation could arise from Lorentz violation The other three articles focus more on original research Charles Lane and Quentin Bailey relate a particular theory of noncommutative geometry to the curved spacetime Standard Model Extension Yuri Bonder and Christobal Corral consider the existence of spacetime symmetries in models with explicit Lorentz violation and Pawel Gusin et al study a spacetime transformation that relates the inside and outside of a nonrotating black hole
