SERVICE MANUAL

MS-10C-IIA

KATO WORKS CO.,LTD.

PREFACE

This Manual has been compiled as a handbook for servicing "Cruspeed", the new automatic digital control prevention device which is fitted to KATO cranes.

Unlike the conventional analog ACS device, the new digital ACS system with its built-in microprocessor has a self-diagnostic function for servicing in addition to its function as an overload prevention device. Consequently, while the conventional analog ACS device requires a service log for data collection, this can now be performed by the digital ACS system with its self-diagnostic function. Furthermore, it has become possible to automatically monitor the status of the overload prevention device itself during routine crane operations, resulting in improved reliability. However, even the most advanced electronic circuit provide adequate crane control performance unless the procedure is correctly followed by service engineers.

It is therefore recommended that this Manual be read thoroughly so that the appropriate service techniques can be mastered.

Food Flavourings Philip R. Ashurst,2012-12-06 The flavour industry has become a

vital element in the growth and success of food and beverage industries worldwide The development of many new products is now directly related to the use of the appropriate flavouring which among other benefits has allowed the use of many novel raw materials The phenomenal growth of specialised consumer products offering special tastes nutritional benefits or convenience almost always directly involves the use of a bespoke flavouring With recent growth in worldwide concern for environmental issues has come a corresponding concern for the use of natural ingredients in foods The flavour industry has been closely involved by offering many of its products as natural alternatives although the vexed issue of what natural means has promoted discussion and debate in many quarters The European Flavouring Directive has attempted to incorporate a definition This is discussed further in chapter 1 The work of the flavourist remains akin to that of the perfumer despite inroads made by sophisticated analytical technology For example use of linked gas chromatography mass spectrometry GC MS instrumentation enables the skilled analyst to identify most components of a competitor's flavouring or the minor ingredients of a natural extract Despite this the industry remains a unique blend of art science and technology in which the experience and knowledge of the flavourist is vital
