**Molecular Beam Epitaxy** John Wilfred Orton, Tom Foxon, 2015 The book is a history of Molecular Beam Epitaxy MBE as

applied to the growth of semiconductor thin films note that it does not cover the subject of metal thin films It begins by examining the origins of MBE first of all looking at the nature of molecular beams and considering their application to fundamental physics to the development of nuclear magnetic resonance and to the invention of the microwave MASER It shows how molecular beams of silane  $\text{SiH}_4$  were used to study the nucleation of silicon films on a silicon substrate and how such studies were extended to compound semiconductors such as GaAs From such surface studies in ultra high vacuum the technique developed into a method of growing high quality single crystal films of a wide range of semiconductors Comparing this with earlier evaporation methods of deposition and with other epitaxial deposition methods such as liquid phase and vapour phase epitaxy LPE and VPE The text describes the development of MBE machines from the early home made variety to that of commercial equipment and show how MBE was gradually refined to produce high quality films with atomic dimensions This was much aided by the use of various in situ surface analysis techniques such as reflection high energy electron diffraction RHEED and mass spectrometry a feature unique to MBE It looks at various modified versions of the basic MBE process then proceed to describe their application to the growth of so called low dimensional structures LDS based on ultra thin heterostructure films with thickness of order a few molecular monolayers Further chapters cover the growth of a wide range of different compounds and describe their application to fundamental physics and to the fabrication of electronic and opto electronic devices The authors study the historical development of all these aspects and emphasise both the often unexpected manner of their discovery and development and the unique features which MBE brings to the growth of extremely complex structures with monolayer accuracy
