Holdgate, Antonia Turberville, Alice Lanne, 2024-03-05 LABORATORY GUIDE TO ENZYMOLOGY An accessible guide to understanding the foundations of enzymology at its application in drug discovery Enzymes are highly specialized proteins necessary for performing specific biochemical reactions essential for life in all organisms In disease the functioning of these enzymes can

become altered and therefore enzymes represent a large class of key targets for drug discovery. In order to successfully target dysfunctional enzymes pharmacologically, the unique mechanism of each enzyme must be understood through thorough and in depth kinetic analysis. The topic of enzymology can appear challenging due to its interdisciplinary nature combining concepts from biology, chemistry, and mathematics. *Laboratory Guide to Enzymology* brings together the theory of enzymology and associated lab based work to offer a practical accessible guide encompassing all three scientific disciplines. Beginning with a brief introduction to proteins and enzymes, the book slowly immerses the reader into the foundations of enzymology and how it can be used in drug discovery using modern methods of experimentation. The result is a detailed but highly readable volume detailing the basis of drug discovery research. *Laboratory Guide to Enzymology* readers will also find descriptions of key concepts in enzymology, examples of drugs targeting different enzymes via different mechanisms, detailed discussion about many areas of enzymology such as binding and steady state kinetics, assay development and enzyme inhibition and activation. *Laboratory Guide to Enzymology* is ideal for all pharmaceutical and biomedical researchers working in enzymology and assay development as well as advanced students in the biochemical or biomedical sciences looking to develop a working knowledge of this field of research.

Environmental Immunochemical Analysis: Detection of Pesticides and Other Chemicals Shirley J. Gee, Bruce D. Hammock, Jeanette M. Van Emon, 2008-10-19. This book is a tutorial designed to instruct the reader in use and application of immunochemical methods of analysis for environmental contaminants. A brief introduction describes basic principles and the advantages and disadvantages of the technology and gives a listing of references which supply more detail. Preparation of the laboratory for use of this technology and the general scientific considerations prior to using the technology are discussed. Detailed step wise procedures are given for analysis of selected analytes: triazine herbicides, carbaryl, paraquat and p nitrophenols etc. In addition to the specific immunoassay methods, a series of support techniques necessary to perform immunochemical methods are described. This book provides specific instruction for certain analytes but also serves to familiarize the novice reader with many generic concepts needed to successfully utilize immunochemistry technology including applications, sampling, sample preparation, extraction, cleanup, quality assurance, methods development and optimization, data handling and troubleshooting. It is not necessary for the reader to actually perform the immunoassays given in this user's guide to obtain familiarity with these concepts. The guide is written so that the information presented can be applied to other immunoassays not given here. Thus the strength of the guide is its universal applicability to immunoassay methods.

OECD Guidelines for the Testing of Chemicals, Section 4 Test No. 457: BG1Luc Estrogen Receptor Transactivation Test Method for Identifying Estrogen Receptor Agonists and Antagonists OECD, 2012-10-02. This Test Guideline describes an in vitro assay which provides concentration response data for substances with in vitro ER agonist and antagonist activity. The test system utilises the BG1Luc4E2 cell line derived from a human ovarian adenocarcinoma.
