**The Burning Answer** Keith Barnham, 2015-05-15 Our society faces a choice We could be enjoying a sustainable lifestyle but we have chosen not to In three generations we have consumed half the oil produced by photosynthesis over eight million generations In two generations we have used half our uranium resources With threats from global warming oil depletion and nuclear disaster we are running out of options Solar power as Keith Barnham says is our necessary solution Barnham explains that the roots of solar energy lie in a little known equation  $E = hf$  an equation which was coincidentally celebrated and explained to the world by Einstein in the same year he discovered  $E = mc^2$  He alleges that the former equation has been overlooked in favor of the latter much to our detriment and Barnham is here to offer us a solution We can still turn things around and solar energy is the key In this provocative inspiring passionately argued book Keith Barnham outlines actions that any one and all of us can take to make an impact now and on future generations The Burning Answer is a solar manifesto for the new climate aware generation and a must read for climate change skeptics

Ruigrok, Christine Ziegler, Leticia F. Cugliandolo, 2016-01-07 The book gathers lecture notes of courses given at the 2014 summer school on integrated biology in Les Houches France Session CII It addresses an emerging field ranging from molecules to cells and to organisms Through examples it presents a new way of thinking using a combination of interdisciplinary and cutting edge methods bridging physics and biology beyond current biophysics Important novel developments are expected in the coming years that may well introduce paradigm shifts in biological science The school had the ambition to prepare participants to become major actors in these breakthroughs The power of integrated approaches is illustrated through two cases interactions between viruses and host cells and flower development The role of forces in biology as well as their mathematical modeling is illustrated in both processes how they allow flower organs to emerge or how they control membrane fusion during virus budding The book also underlines the importance of conformational changes and dynamics of proteins particularly during membrane processes It explains how membrane proteins can be handled and studied by molecular simulations Finally the book also contains concepts in cell biology in thermodynamics and several novel approaches such as in cell NMR Altogether the chapters show how examining a biological system from different viewpoints based on multidisciplinary aspects often leads to enriching controversial arguments
