Human Systems Integration for Mining Automation Robin Burgess-Limerick, Tim Horberry, Danellie Lynas, Andrew Hill, Joel M Haight, 2025-02-12 Human Systems Integration for Mining Automation is the professional's guide to understanding the issues, approaches and pitfalls associated with mining automation from a human perspective. This book delves into a timely and fast-developing issue in mining and the wider minerals industry: the design and deployment of automation. The book approaches this from a Human Systems Integration standpoint in which the technical and human-related aspects are jointly considered as part of an integrated automated mining system. This accessible and readable title offers a wider Human Systems Integration framework that can be applied to mining projects. It is based on an established framework that has been developed and used successfully in other work. The framework is backed up with information obtained from mines in Australia, the USA, Canada, Sweden and Chile and original equipment manufacturers such as Caterpillar, Komatsu, Sandvik and Epiroc. Every reader of this book will recognise the essential benefits of human systems integration for mining automation. This book will be an ideal read for industry professionals including systems engineers, safety engineers, mining engineers, human factors engineers and engineers working on developing and deploying automation in mining and related industries including rail, road transport and process control. It will also be of interest to students, researchers and academics in related fields.

Human-System Integration in the System Development Process

National Research Council, Division of Behavioral and Social Sciences and Education, Committee on Human Factors, Committee on Human-System Design Support for Changing Technology, 2007-06-15. In April 1991, BusinessWeek ran a cover story entitled 'I Can't Work This Thing' about the difficulties many people have with consumer products such as cell phones and VCRs. More than 15 years later, the situation is much the same but at a very different level of scale. The disconnect between people and technology has had society-wide consequences in the large-scale system accidents from major human error such as those at Three Mile Island and in Chernobyl. To prevent both the individually annoying and nationally significant consequences, human capabilities and needs must be considered early and throughout system design and development. One challenge for such consideration has been providing the background and data needed for the seamless integration of humans into the design process from various perspectives: human factors, engineering, manpower, personnel, training, safety and health, and in the military, habitability and survivability. This collection of development activities has come to be called human system integration (HSI). Human System Integration in the System Development Process reviews in detail more than 20 categories of HSI methods to provide invaluable guidance and information for system designers and developers.

Designing Human Systems Steve Hickey, Holly Matthies, Enid Mumford, 2006-06-03. Enid Mumford, 1924-2006, was a pioneer in the sociotechnical design of computer systems. Prof. Mumford's work successfully investigated the introduction and implementation of computer systems by large corporations and governments. Mumford's ETHICS approach to software

development emphasizes user participation thus avoiding many of the problems of introducing new systems It takes a holistic view of organizations unifying both social and technological solutions This updated edition of Mumford s book Designing Human Systems describes how modern agile programming techniques complement the ETHICS method Together the two methods cover both user and developer issues This integrated approach offers an improved methodology for successful software development projects
