

The optional power steering system is an open-center hydraulic circuit which contains its own pump, cylinders, and reservoir (early units). (Fig. 1).

On early units the power steering pump uses oil from the reservoir. This reservoir contains a wire mesh filter and is mounted in front of the engine on the right-hand side. Oil for the power steering pump on later units comes from and is returned to the reverse oil cooler circuit.

The gear-type power steering pump mounts in front of the engine and is driven by the engine upper idler gear.

The two cylinders mount under the seat and connect to the steering levers for hydraulic assist.
