*Librarians* Lisa Federer, 2016-09-15 Technological advances and the rise of collaborative interdisciplinary approaches have changed the practice of research. The 21st century researcher not only faces the challenge of managing increasingly complex datasets but also new data sharing requirements from funders and journals. Success in today's research enterprise requires an understanding of how to work effectively with data yet most researchers have never had any formal training in data management. Libraries have begun developing services and programs to help researchers meet the demands of the data driven research enterprise giving librarians exciting new opportunities to use their expertise and skills. The Medical Library Association Guide to Data Management for Librarians highlights the many ways that librarians are addressing researchers' changing needs at a variety of institutions including academic, hospital and government libraries. Each chapter ends with pearls of wisdom, a bulleted list of 5-10 takeaway messages from the chapter that will help readers quickly put the ideas from the chapter into practice. From theoretical foundations to practical applications, this book provides a background for librarians who are new to data management as well as new ideas and approaches for experienced data librarians.

**Organism Approaches for Understanding the Basis of Neurological Disease** Robert J. Harvey, Kirsten

Harvey, 2017-07-05 The advent of next generation sequencing technologies has resulted in a remarkable increase in our understanding of human and animal neurological disorders through the identification of disease causing or protective sequence variants. However, in many cases, robust disease models are required to understand how changes at the DNA, RNA or protein level affect neuronal and synaptic function or key signalling pathways. In turn, these models may enable understanding of key disease processes and the identification of new targets for the medicines of the future. This e-book contains original research papers and reviews that highlight either the impact of next generation sequencing in the understanding of neurological disorders or utilise molecular, cellular and whole organism models to validate disease causing or protective sequence variants.

**Human Geographies of Stellenbosch** Ronnie Donaldson, 2021-02-11 Amid a growing turn towards Southern cities, South African urban geographers continue to remind us why and how to attend to local context and draw on theory from elsewhere. *Human Geographies of Stellenbosch: Transforming Space, Preserving Place*, edited by Ronnie Donaldson, provides a deep look at crucial questions facing one of South Africa's most well-known town cities. Written from years of local knowledge by scholars at Stellenbosch University, this volume asks what urban transformation means, who it is for, and the politically tantalising question of whether and how we might hold on to some of the old while aspiring towards the new. In a global context in which we are all searching for how to justly remember our messy past, how to decolonise and hold onto what makes places unique, this volume will be of interest to scholars asking such questions in and beyond urban studies.
