

secrete the adequate amount of lubrication during sexual intercourse. Hypoactive desire refers to the absence of sexual desire.

6. Sexual dysfunction due to a general medical condition: This is a disorder where there is evidence that a medical condition is the cause of disruption in sexual functions.
7. Sexual Pain Disorders: This is divided into Dyspareunia and Vaginismus. The former causes genital pain during after and at times before intercourse. The latter refers to the involuntary contraction of perineal muscles.

Sexual function is a process regulated, mediated and initiated by a series of physiological and biological interactions. Each partner's life experience, the shared and common experience of the couple and interaction patterns between the couple are attributes of the physiological aspect of sexual function. Malfunction of these physiological features could result in sexual dysfunction. The social settings which surround an individual can also trigger sexual disorders. Poor interpersonal relations between couples and members of the society can induce negative emotions, such as anxiety and depression which may result in sexual dysfunction. Hormones play a major role in mediating normal physiology in the body. Different sexes have different hormonal balance, for example, testosterone is in higher quantities in men whilst estrogen and progesterone are more in women. Genetic defects can cause alteration of these hormones, resulting in level of female hormones rising in men. This can lead to genetic identity disorder as the hormonal activities in an individual will generate emotions experienced by the opposite sex.

Handbook of Gender Research in Psychology Joan C. Chrisler, Donald R. McCreary, 2010-03-12 Donald R McCreary and Joan C Chrisler The Development of Gender Studies in Psychology Studies of sex differences are as old as the eld of psychology and they have been conducted in every sub eld of the discipline There are probably many reasons for the popularity of these studies but three reasons seem to be most prominent First social psychological studies of person perception show that sex is especially salient in social groups It is the rst thing people notice about others and it is one of the things we remember best Fiske Haslam Stangor Lynch Duan Glass 1992 For example people may not remember who uttered a witty remark but they are likely to remember whether the quip came from a woman or a man Second many people hold rm beliefs that aspects of physiology suit men and women for particular social roles Men s greater upper body strength makes them better candidates for manual labor and their greater height gives the impression that they would make good leaders i e people we look up to Women s reproductive capacity and the caretaking tasks e g breastfeeding baby minding that accompany it make them seem suitable for other roles that require gentleness and nurturance Third the logic that underlies hypothesis testing in the sciences is focused on difference Researchers design their studies with the hope that they can reject the null hypothesis that experimental groups do not differ
