Hallock,2006-11-30 In 1930 there were 288

competitive major newspaper markets in the United States Today there are fewer than 30 The diminishing diversity of opinion and voices in newspapers editorials is taking place even as technological advances seemingly provide more sources of the same information As Hallock shows the concentration of media ownership in fewer and fewer hands allows those individuals and entities an inordinate amount of influence In this intriguing book he examines 18 newspaper markets to show us exactly how and where this troubling trend is occurring what it means for the political landscape and ultimately how it can affect us all Newspaper editorials say a lot about the society in which we live They are not just an indication and reflection of the issues of the day and of which way the political wind is blowing They are also a part of the political climate that sets the agenda for politicians and helps them discern which are the hot button issues and which side people are on Journalists and politicians enjoy a level of symbiosis in their relationships they influence each other indirectly It therefore follows that when fewer ideas and a narrower range of opinions are expressed in the nation's newspapers there is a real danger that our thinking can become more simplistic as well

Clinician's Guide To Neuropsychological Assessment Rodney D. Vanderploeg, 2014-04-04 Neuropsychological assessment is a difficult and complicated process Often experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error Since formal test data on the surface appear unambiguous and objective they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity reliability and interpretability of test data But interpretation is far from straightforward and a pragmatic application of assessment results requires attention to a multitude of issues This long awaited updated and greatly expanded second edition of the Clinician's Guide to Neuropsychological Assessment like the first focuses on the clinical practice of neuropsychology Orienting readers to the entire multitude of issues it guides them step by step through evaluation and helps them avoid common misconceptions mistakes and methodological pitfalls It is divided into three sections fundamental elements of the assessment process special issues settings and populations and new approaches and methodologies The authors all of whom are actively engaged in the clinical practice of neuropsychological assessment as well as in teaching and research do an outstanding job of integrating the academic and the practical The Clinician's Guide to Neuropsychological Assessment Second Edition will be welcomed as a text for graduate courses but also as an invaluable hands on handbook for interns postdoctoral fellows and experienced neuropsychologists alike No other book offers its combination of breadth across batteries and approaches depth and practicality
