

How to Write a Critical Review Paper

Adapted from Jessica Lam

What is a Critical Review Paper?

A critical review paper is a critique of a topic. This can be a technique, a method, a discussion, a court ruling, etc. The main goal of the critical review is to demonstrate that you understand the issues and ideas surrounding your chosen topic. **This means you must interpret the issues and not just explain them!**

These critical reviews aim to strengthen your critical thinking when it comes to issues around forensic science. If you continue with graduate school, research, or even industry, you will likely need to defend your thoughts and conclusions with research and evidence. In order to do this, you will need to anticipate what kind of questions and criticisms you will receive and rebuke it. The critical thinking you will be doing in this assignment will also help you in reducing bias. Tunnel vision and confirmation bias can be minimized by looking at the scientific literature, or court proceedings.

A Critical Review is NOT:

- A research paper
 - It has elements of a research paper in that you must support and facilitate your discussion with peer-reviewed journal articles, original articles, text books, etc.
 - A critical review has the added element of interjecting your own thoughts and opinions into the work. Explain to the reader what you think on the topic and why.
- A review article
 - A review article is a summary of the technique. While there is some interjection of thoughts, it is typically at the end in a "future prospects" section.
 - A critical review not only describes the issues, but also the discourse. You should have your own opinions on the topic at hand.
- Just an opinion
 - If you are giving your opinion about the issue but you are not addressing both sides of the argument and/or you are not supporting your statements with appropriate references, then it is not a critical review! You need to show that you are objective with your opinions by considering both sides and backing up your claims with evidence from peer-reviewed literature.
