The 17th International Conference Interdisciplinarity in Engineering Liviu Moldovan, Adrian Gligor, 2024-03-28 This book contains research papers that were accepted for presentation at the 17th International Conference on Interdisciplinarity in

Engineering INTER ENG 2023 which was held on 5 6 October 2023 in the city of T rgu Mure Romania The general scope of the conference Towards transition for a more competitive European industry in a smart safe and sustainable future is proposing a new approach related to the development of a new generation of smart factories grounded on the manufacturing and assembly process digitalization It is related to advance manufacturing technology lean manufacturing sustainable manufacturing additive manufacturing manufacturing tools and equipment It is a leading international professional and scientific forum of great interest for engineers and scientists who can read in this book research works contributions and recent developments as well as current practices in advanced fields of engineering Progress in Advanced Information and Communication Technology and Systems Mykhailo Ilchenko, Leonid Uryvsky, Larysa Globa, 2022-11-17 This book highlights the most important research areas in information and communication technologies namely the research in fields of modern information technologies that deal with various aspects of the analysis and solution of practically important issues of information systems in general and contains discussion about the progression from big data to smart data development of cloud based architecture practical implementation of Internet of Things IoT the fundamentals of information and analytical activities studying of modern communication technologies contains original works dealing with many aspects of construction using research and forecasting of technological and services characteristics of communication systems as well as research of modern radio electronics technologies that contains actual papers which show some effective technological solutions that can be used for the implementation of novel radio electronics systems These results can be used in the implementation of novel systems and to promote information exchange in e societies This book offers a valuable resource for scientists lecturers specialists working at enterprises and graduate and undergraduate students who engage with problems in information and communication technologies Circularity in Textiles Syeda Rubab Batool, Sheraz Ahmad, Yasir Nawab, Muzzamal Hussain, 2023-12-26 This book explains the basic principles of recycling and circularity in textiles With the emergence of quick fashion textile manufacturing has expanded significantly over the past few decades The importance of textiles to human society goes beyond their practical uses in providing warmth protection and comfort Therefore the usage and production of textiles are enhanced substantially compared to the past globally As a result rates of textile production and trash output have grown drastically The other side of the story is the drastic rate at which they are dumped into landfills which is almost a garbage truck every second If this alarming trend continues there will be serious environmental consequences It is well known that the textile sector is recognized as the second largest industrial polluter in the world producing 20% of the global wastewater and accounting for 10% of carbon emissions Additionally harmful chemicals are utilized and emitted during the manufacture of textiles which has an impact on ecosystems and public health The last 150 years of the textile industrial system fundamentally follow the take make dispose principle in which resources are continuously taken out of a natural system take changed during production make and used for various purposes within the

human system use and then released back into the environment dispose of In this way manufacturing industries produce waste producing commodities to make money which eventually has a negative impact leading to the lack of resources resulting in price volatility uncertainty and economic crises This book consists of 11 potential chapters to cover all the aspects of circularity in textiles **The Machinery Compendium - 3rd Edition** Fibre2Fashion,2018-10-16 The Machinery Compendium an exclusive feature for the global textile machinery industry. The compendium would showcase Textile Machineries that are strategically innovated for future The Machinery Compendium provides an opening to the worldwide textile machinery manufacturer's community to showcase their latest technologies and innovations. The compendiums that we at Fibre2Fashion publish from time to time do two things simultaneously take stock of the situation and look ahead This particular compendium on Industry 4 0 too does both but more of the latter The canvas is huge and like the universe itself it is forever expanding The term Industry 4 0 means different things to different people and so the predictions from industry experts as well as academics and researchers differ as well But what all agree on is that the convergence of information technology IT and operational technology OT will drive manufacturing The next phase of industrialisation being referred to popularly as the Fourth Industrial Revolution will be different from the earlier ones in that it will also be about life cycles In short it goes beyond manufacturing The concept itself is still new and evolving at a frenetic pace This also makes it difficult for those in industry to go the Industry 4 0 way Formulating strategies and implementing them needs to start with knowledge That's where this compendium comes in This hard bound volume includes among other things vision statements from industry leaders some best practices and case studies and the F2F Ready Reckoner Handbook of Lead-Free Solder Technology for Microelectronic Assemblies Karl J. Puttlitz, Kathleen A. Stalter, 2004-02-27 This reference provides a complete discussion of the conversion from standard lead tin to lead free solder microelectronic assemblies for low end and high end applications Written by more than 45 world class researchers and practitioners the book discusses general reliability issues concerning microelectronic assemblies as well as factors specific to the tin rich replacement alloys commonly utilized in lead free solders It provides real world manufacturing accounts of the introduction of reduced lead and lead free technology and discusses the functionality and cost effectiveness of alternative solder alloys and non solder alternatives replacing lead tin solders in microelectronics Machining of Titanium Alloys J. Paulo Davim, 2014-07-05 This book presents a collection of examples illustrating the resent research advances in the machining of titanium alloys These materials have excellent strength and fracture toughness as well as low density and good corrosion resistance however machinability is still poor due to their low thermal conductivity and high chemical reactivity with cutting tool materials This book presents solutions to enhance machinability in titanium based alloys and serves as a useful reference to professionals and researchers in aerospace automotive and biomedical fields Advances in Mechanism and Machine Science Tadeusz Uhl, 2019-06-13 This book gathers the proceedings of the 15th IFToMM World Congress which was held in Krakow Poland from June 30 to July 4

2019 Having been organized every four years since 1965 the Congress represents the world's largest scientific event on mechanism and machine science MMS The contributions cover an extremely diverse range of topics including biomechanical engineering computational kinematics design methodologies dynamics of machinery multibody dynamics gearing and transmissions history of MMS linkage and mechanical controls robotics and mechanics micro mechanisms reliability of machines and mechanisms rotor dynamics standardization of terminology sustainable energy systems transportation machinery tribology and vibration Selected by means of a rigorous international peer review process they highlight numerous exciting advances and ideas that will spur novel research directions and foster new multidisciplinary collaborations
