A visit to the Victoria and Albert Museum.

Last Saturday my sister and I visited the Victoria and Albert Museum in South Kensington, London. It's the biggest art and design museum in the world!

The museum has about 4,000,000 wonderful exhibits. You can see displays of fashion, photographs, jewellery, furniture, glass, paintings and drawings.

We decided to look at the fashion display and saw interesting old costumes and modern clothes as well. Then we went to the museum café for a delicious lunch. After lunch, we went to the museum shop to buy souvenirs.

We learned a lot about the history of fashion and had a great time!

Dear Emma,

I hope you're well and enjoying the sunshine. I'm fine, and am writing to tell you about my summer job at Beans Coffee Shop.

I am working as a waitress, and it's my job to take orders, clear the tables and serve drinks. The shop is always busy, so there's a lot to do.

I have to be polite and friendly with the customers and to work as quickly as I can! I try to be helpful and suggest different types of coffee for people to try.

I love my job and have made a lot of new friends! That's all for now.

Yours,
 Anna

Gerhard Vogel, 2006 This book is a landmark in the continuously changing world of drugs It is essential reading for scientists and managers in the pharmaceutical industry who are involved in drug finding drug development and decision making in the development process

Drug Discovery and Evaluation: Safety and Pharmacokinetic Assays Franz J. Hock, Michael K. Pugsley, 2024-10-21 Many aspects of drug safety have become an outstanding and even persistent issue and may occur during the process of both drug discovery and development. Until 15 years ago, drug discovery and evaluation was primarily a sequential process starting with the selection of the most pharmacologically active compound from a series of newly synthesized small molecule chemical series by means of distinctive pharmacological assays. Safety aspects were addressed by evaluation of the selected compound at high doses in a series of specific studies directed at indications other than the intended indication of the new compound. These tests are then followed by pharmacokinetic studies which are primarily conducted to confirm whether the selected compound possesses a suitable half-life for sufficient exposure and efficacy and whether it has the desired properties: specificity to the intended route of administration. Safety aspects relied predominantly on the conduct of single and repeat toxicology/dose studies which inform changes in organ structure rather than organ function. Both toxicological and pharmacokinetic studies are adapted to the progress of studies in clinical pharmacology and clinical trials. The new edition of this well and broadly accepted reference work contains several innovative and distinguished chapters. This sequential strategy has been abandoned with this new version of the book for several reasons. Of the possible multitude of negative effects that novel drugs may impart on organ function, e.g. ventricular tachyarrhythmia, many are detected too late in non-clinical studies to inform clinicians. On the other hand, negative findings in chronic toxicity studies in animals may turn out to be irrelevant for human beings. New scientific approaches, e.g. high throughput screening, human pluripotent stem cells, transgenic animals, knock-out animals, in silico models, pharmacogenomics and pharmacoproteomics, as well as Artificial Intelligence (AI) methods, offered new possibilities. There are several examples that show that the druggability of compounds was considerably underestimated when the probability of success of a new project was assessed. The success rate in the pharmaceutical industry and the introduction of new chemical entities to the market per year dropped dramatically, whereas the development time for a new compound increased, sometimes exceeding the patent protection. Research and development scientists, involving the following changes, therefore adopted a change of strategy: Parallel instead of sequential involvement of the various disciplines; multidimensional compound optimization. The term Safety Pharmacology was coined. The International Conference on Harmonization (ICH) founded a Safety Pharmacology Working Group and the Safety Pharmacology Society (SPS) was launched. The discipline provided for evaluation, development and validation of a multitude of safety tests outlined in the Core Battery of Studies. Characterizing the exposure profile of a drug by conducting pharmacokinetic studies that evaluate the absorption, distribution, metabolism and excretion should be investigated at an early stage of development as results contribute to the selection of a compound for further development. Advancements in Toxicology were achieved by the introduction of new methods, e.g. in silico methods, genetic toxicology, computational toxicology and AI. The book is a landmark in the continuously changing world of drug research and developments. As such, it is

essential reading for many groups not only for all students of pharmacology and toxicology but also for industry scientists and physicians especially those involved in clinical trials of drugs and for pharmacists who must know the safety requirements of drugs The book is essential for scientists and managers in the pharmaceutical industry who are involved in drug discovery drug development and decision making in the development process In particular the book will be of use to government institutions and committees working on official guidelines for drug evaluation worldwide
