Contraception Donna Shoupe,2007-11-07 I opened my series editor manuscript of *The Handbook of Contraception A Guide for Practical Management* edited by Drs Donna Shoupe and Siri Kjos on a tiny plane on the way to giving a lecture in Albany NY I expected to peruse the manuscript and found that I could not put it down *The Handbook of Contraception A Guide for Practical Management* is an incredibly informative and enjoyable read In keeping with the objective of this series for primary care clinicians there is a quality in this title that is uncommon among medical textbooks The chapters of this book are written with extraordinary intelligence and understanding and with attention to practical considerations in the selection and management of contraceptive options The authors have reviewed the science behind contraception including the chemical structure and effects of hormonal contraception physiology of contraception efficacy rates and side effects as well as the practical considerations that are relevant in helping patients choose between different contraceptive options They do this with a clarity of language and intent that lets the book cover with sufficient detail the full range of questions that any primary care clinician will have regarding any of the traditional or new contraceptive options Also included in each chapter is a section on counseling tips which explicitly answers many of the questions that clinicians and their patients often have when discussing contraceptive options For a book so useful and well done the editors and authors deserve our thanks

Anticancer Drug Development Guide Beverly A. Teicher,Paul A. Andrews,2004-02-01 This unique volume traces the critically important pathway by which a molecule becomes an anticancer agent The recognition following World War I that the administration of toxic chemicals such as nitrogen mustards in a controlled manner could shrink malignant tumor masses for relatively substantial periods of time gave great impetus to the search for molecules that would be lethal to specific cancer cells Weare still actively engaged in that search today The question is how to discover these anticancer molecules

Anticancer Drug Development Guide Preclinical Screening Clinical Trials and Approval Second Edition describes the evolution to the present of preclinical screening methods The National Cancer Institute's high throughput in vitro disease specific screen with 60 or more human tumor cell lines is used to search for molecules with novel mechanisms of action or activity against specific phenotypes The Human Tumor Colony Forming Assay HTCA uses fresh tumor biopsies as sources of cells that more nearly resemble the human disease There is no doubt that the greatest successes of traditional chemotherapy have been in the leukemias and lymphomas Since the earliest widely used in vivo drug screening models were the murine L 1210 and P388 leukemias the community came to assume that these murine tumor models were appropriate to the discovery of antileukemia agents but that other tumor models would be needed to discover drugs active against solid tumors
