*Semantics : Primes and Universals* Anna Wierzbicka,1996-03-28 This book provides a synthesis of Wierzbicka's theory of meaning which is based on conceptual primitives and semantic universals using empirical findings from a wide range of languages While addressed primarily to linguists the book deals with highly topical and controversial issues of central importance to several disciplines including anthropology psychology and philosophy Conceptual primitives and semantic universals are the cornerstones of a semantic theory which Anna Wierzbicka has been developing for many years *Semantics Primes and Universals* is a major synthesis of her work presenting a full and systematic exposition of that theory in a non technical and readable way It delineates a full set of universal concepts as they have emerged from large scale investigations across a wide range of languages undertaken by the author and her colleagues On the basis of empirical cross linguistic studies it vindicates the old notion of the psychic unity of mankind while at the same time offering a framework for the rigorous description of different languages and cultures A major synthesis of Anna Wierzbicka's work

*Metamaterials for Manipulation of Thermal Radiation and Photoluminescence in Near and Far Fields* Yinhui Kan,2022-09-20 This book provides a series of methods for flexibly and actively manipulating thermal emission and photoluminance by advanced nanostructures metamaterials Nanostructures in subwavelength scales can be designed to precisely modulate light matter interactions and thereby tailoring both thermal radiations and photon emissions This book explores approaches for designing different kinds of nanostructures including multilayers gratings nanoridges and waveguides to improve the flexibility and functionality of micro nanodevices With the help of these subwavelength nanostructures thermal radiation and photoluminescence have been fully manipulated in near and far fields regarding to the intensity spectrum polarization and direction The proposed methods together with designed metamaterials open new avenues for designing novel micro nanodevices or systems for promising applications like thermal energy harvesting detecting sensing and on chip quantum optical networks
