**Scientific Information Transfer: The Editor's Role** M. Balaban,2012-12-06 It was Faraday who in 1821 said that there are three necessary stages of useful research The first to begin it the second to end it and the third 1 to publish it There has since indeed been so much research and publication that we have become increasingly alarmed by the galloping proliferation of scientific information produced in relation to the user s ability to retrieve and consume it effectively conveniently and creatively In 1948 to deal with this concern the Royal Society Scientific Infor 1 mation Conference held in

London spanned the whole realm of scientific information Sir Robert Robinson President of the Royal Society in his opening address noted that the study of scientific information services in all its ramifications has enormous scope and the London conference dealt with scientific publication format editorial policy subject grouping organization abstracting reviews classification indexing and training of information officers It was about this time that information science began to develop more on the retrieval end so it seems logical that the first editors group founded in 1949 was ICSU AB the International Council of Scientific Unions Abstracting Board In 1958 the National Academy of Sciences International Conference of 2 Scientific Information in Washington limited its interests and expanded on the later phases of the life cycle of information storage and retrieval

**Public Sociology** Ben Agger, 2007-03-06 Public Sociology 2nd edition offers a fundamental enriching of method far beyond the scope of research methodology textbooks It looks at sociology as a social act as writing in arguing for a public sociology that can more fully embrace and address crucial public issues Building on the philosophy of science and recent postmodernist critiques

Agger shows how the social science text reproduces the existing social world suppressing science's author in order to position itself as simply a mirror of nature not a deliberate human version replete with ontology theory values and politics. As such, this method is an argument that polemicalizes quietly for a certain view of the world. Agger peruses how science could be crafted differently acknowledging even embracing its authoriality while opening it to crosscurrents of other humanistic writing. Only by liberating sociology from the secret writing of science can its ineradicable humanity be realized. But rather than dwelling on recent critiques, this more than any other book looks ahead to a new way of doing science, one that is simultaneously more scientific and humanistic. Its prescient view of how social science can take the lead in building a more democratic public sphere will make it a must read for every student and researcher.
