

Now let's assemble the outer solar system as Copernicus did.

4. Computing θ_e . Copernicus knew that it takes 365 days for Earth to circle the Sun once, that is, for it to move through an angle of 360 degrees. Therefore, each day, Earth moves through an angle given by the mathematical expression $\left(\frac{1 \text{ day}}{365 \text{ days}}\right) \times 360 \text{ degrees}$. Or after d days, Earth has moved $\left(\frac{d}{365}\right) \times 360 \text{ degrees}$.
 - a. Compute how many degrees Earth moves in its orbit in 1 day.
 - b. Copernicus counted how many days elapsed between opposition (point E) and quadrature (point E'): 107 days. Using the given expression, compute how many degrees the Earth moves in 107 days. This is angle θ_e .
5. Computing θ_m . Copernicus also knew that it takes 687 days for Mars to circle the Sun once, that is, for Mars to move through an angle of 360 degrees.
 - a. Following the procedure in Part 4, write down a mathematical expression that represents how many degrees Mars moves in its orbit each day.
 - b. Now write down an expression that represents how many degrees Mars moves in its orbit in d days.
 - c. Compute how many degrees Mars moves in the 107 days between opposition and quadrature. This is angle θ_m .
6. Computing θ . Substitute your answers to Parts 4 and 5 into **Equation 9-3** to compute the value of angle θ .
7. Mars's orbit. Finally, use Equation 9-2 to compute the radius of Mars's orbit, in AUs.

■ EXTRA CREDIT: Jupiter's and Saturn's orbits — Do these planets

Jupiter takes 4332 days—almost 12 years—to orbit the Sun and around 88 days to go from opposition to the next quadrature. Saturn takes 10,761 days—nearly 30 years—to complete its orbit and there are also about 88 days between its opposition and next quadrature.

- a. On a separate sheet of paper, apply the above procedure for Mars to determine the radii of the orbits of Jupiter and Saturn, in AUs.
- b. Using a ruler, draw a careful scale-model showing the spacings of the six known planets in Copernicus's solar system to the scale 1 cm = 1 AU.

With a focus on foundational information the Exercise Testing and Prescription Lab Manual Second Edition offers practical application of knowledge and skills associated with standardized health and fitness related tests Progressing through 14 easy to follow experiential based learning labs readers will gain the skills and techniques required for successful completion of the ACSM Certified Health Fitness Specialist certification CHFS The improved second edition includes the latest updates consistent with the recent modifications published within the ACSM's Guidelines for Exercise Testing and Prescription Eighth Edition In this new edition readers will also find the following features In depth content regarding functional parameters related to exercise especially in regard to heart rate and blood pressure Additional

information on body composition testing focusing on improved knowledge and skills related to assessment of skinfolds and circumferences New emphasis on the importance of assessment and how assessment relates to overall program development An updated format that flows progressively through testing and prescription Enhanced discussion questions within each lab which incorporate more in depth analysis of the information being covered Though most closely matched with ACSM CHFS certification guidelines Exercise Testing and Prescription Lab Manual Second Edition is also useful for individuals preparing for certification within other training organizations or as a resource for the ACSM Certified Personal Trainer certification The progression of labs through the testing and prescription process easy to follow instructions and forms and worksheets also make this lab manual an excellent experiential component for a course in exercise testing and prescription Exercise Testing and Prescription Lab Manual Second Edition is organized into three sections covering pretest responsibilities exercise testing techniques and exercise prescription Readers will learn safety procedures and requirements for exercise testing equipment follow step by step instructions for calibration of laboratory instruments and learn guidelines for medical history evaluation risk factor evaluation and stratification and informed consent Next the application of techniques used in assessing the components of health related fitness is presented Within the exercise prescription section readers learn about the calculation of metabolic work the three phases of exercise prescription assessment of participants goals and gaining participants commitment to the exercise prescription A final comprehensive lab challenges readers to apply techniques and principles in developing various case studies Each lab features the same easy to follow format outlining the purpose of the lab materials required background information procedures discussion questions and references Detailed appendixes contain a summary of the effects of common pharmacological agents on cardiorespiratory responses at rest common metric conversions used in exercise testing and prescription calculations a list of metabolic and anthropometric formulas and answers to lab questions The appendixes also contain all forms and worksheets required for collecting data and completing the lab assignments The second edition of the Exercise Testing and Prescription Lab Manual provides focused step by step preparation for those studying for the ACSM CHFS certification With its reorganized format up to date information and forms and worksheets this text is also a valuable best practices reference for health and fitness specialists certified by the ACSM and other organizations

El-Hi Textbooks in Print ,1984 Facilitating Seven Ways of Learning James R. Davis,Bridget D. Arend,2023-07-03 For teachers in higher education who haven t been able to catch up with developments in teaching and learning James Davis and Bridget Arend offer an introduction that focuses on seven coherent and proven evidence based strategies The underlying rationale is to provide a framework to match teaching goals to distinct ways of learning based on well established theories of learning The authors present approaches that readers can readily and safely experiment with to achieve desired learning outcomes and build confidence in changing their methods of teaching Research on learning clearly demonstrates that learning is not one thing but many The learning associated with developing a skill is different from the

learning associated with understanding and remembering information which in turn is different from thinking critically and creatively solving problems making decisions or change paradigms in the light of evidence Differing outcomes involve different ways of learning and teaching strategies The authors provide the reader with a conceptual approach for selecting appropriate teaching strategies for different types of content and for achieving specific learning objectives They demonstrate through examples how a focused and purposeful selection of activities improves student performance and in the process makes for a more effective and satisfying teaching experience The core of the book presents a chapter on each of the seven ways of learning Each chapter offers a full description of the process illustrates its application with examples from different academic fields and types of institutions clearly describes the teacher s facilitation role and covers assessment and online use The seven ways of learning are Behavioral Learning Cognitive Learning Learning through Inquiry Learning with Mental Models Learning through Groups and Teams Learning through Virtual Realities and Experiential Learning Along the way the authors provide the reader with a basis for evaluating other approaches to teaching and other learning methodologies so that she or he can confidently go beyond the seven ways to adapt or adopt further strategies This is the ideal companion for teachers who are beginning to explore new ways of teaching and want to do some serious independent thinking about learning The book can also be used to prepare graduate students for teaching and will be welcomed by centers for teaching and learning to help continuing faculty re examine a particular aspect of their teaching
