Film and Philosophy, 2007 Human Flourishing in an Age of Gene Editing Erik Parens, Josephine Johnston, 2019-07-29

International uproar followed the recent announcement of the birth of twin girls whose genomes had been edited with a breakthrough DNA editing technology. This technology called clustered regularly interspaced short palindromic repeats or CRISPR-Cas9 can alter any DNA including DNA in embryos meaning that changes can be passed to the offspring of the person that embryo becomes. Should we use gene editing technologies to change ourselves, our children, and future generations to come? The potential uses of CRISPR-Cas9 and other gene editing technologies are unprecedented in human history. By using these technologies we eradicate certain dreadful diseases. Altering human DNA however raises enormously difficult questions. Some of these questions are about safety. Can these technologies be deployed without posing an unreasonable risk of physical harm to current and future generations? Can all physical risks be adequately assessed and responsibly managed? But gene editing technologies also raise other moral questions which touch on deeply held personal, cultural, and societal values. Might such technologies redefine what it means to be healthy or normal or cherished? Might they undermine relationships between parents and children or exacerbate the gap between the haves and have-nots? The broadest form of this second kind of question is the focus of this book: What might gene editing and related technologies mean for human flourishing? In the new essays collected here, an interdisciplinary group of scholars asks age-old questions about the nature and well-being of humans in the context of a revolutionary new biotechnology, one that has the potential to change the genetic make-up of both existing people and future generations. Welcoming readers who study related issues and those not yet familiar with the formal study of bioethics, the authors of these essays open up a conversation about the ethics of gene editing. It is through this conversation that citizens can influence laws and the distribution of funding for science and medicine; that professional leaders can shape understanding and use of gene editing and related technologies by scientists, patients, and practitioners; and that individuals can make decisions about their own lives and the lives of their families.
